With 194 incidents thus eliminated, there remain thirty-four which contain some evidence but have no apparent ready explanation. This statement is true only under the assumption that the evidence is accepted as reliable and accurate. When psychological and physiological factors are taken into consideration, all of these incidents can be explained rationally, as pointed out by Rand Corporation. Dr. Pitts of Air Materiel Command Aero-Medical Laboratory (see Appendix "G").

Air Materiel Command Aero-Medical Laboratory (Dr. Paul T. Pitts)  
212 Incidents considered)

There are sufficient psychological explanations for the reports of unidentified flying objects to provide plausible explanations for reports not otherwise explainable. These errors in identifying real stimuli result chiefly from inability to estimate speed, distance, size.

All of the remaining 34 incidents are treated in detail in this report. These incidents form no pattern in regard to area of sighting, type of object, or manner of performance. There are indications, however, that some sightings were influenced by earlier reports. These probably would not have been considered unusual or reported had there been no publicity.

Summary of AIC Evaluation of Remaining Reports

VII. Summary of AIC Evaluation of Remaining Reports

The remaining unexplained incidents (see Appendix "I") exhibited the common characteristics. Two of them, by statements of the reporters, could not have been made had the witnesses not read of the 1st. Incident (Incident No. 17). Most were distributed without pattern throughout the United States. A few were outside the U. S. No two descriptions of appearance or performance were exactly alike. The reported sightings occurred at various times of day and year.

APPENDIX I

In the following section of this report, each remaining unexplained incident is considered separately. It is not the intent to generally discredit the character of observers, but each case has undesirable elements, and these cannot be disregarded. The numerical designation is merely the categorical order of the incident in the project files.

Incident #35 -- off coast of Oregon -- 12 November 1947

The information given here is too meager for a definite conclusion to be drawn concerning the identity of the objects observed. It is probable, however, that they were two parts of a meteor that had broken upon entrance into the earth's atmosphere. The length of time in sight is unduly great, but one wonders whether this might not have been grossly overestimated for psychological reasons. Otherwise, the scanty description favors the meteoric hypothesis.

- 26. Remarks: **(over)**

Two flying discs trailing jet-like streams of fire were sighted from the  
bridge of the tanker *Albatross*, early Wednesday, Second District [redacted]  
[redacted] radio telegraphed the United Press. The discs moved at  
tremendous speed out of the north horizon and curved in a westerly direction  
in a long low arc. Thought they were moving between 700 to 900 MPH.  
Didn't think they were meteors because they generally do not travel in pairs  
and usually fall to the horizon. Thought they were "flying discs".

Also observed by: Ordinary Seaman [redacted] who claimed he also saw "discs".
