SECRET INFORMATION

17 March 1950
Farmington, New Mexico
(BALLOON) Observation

Plastic UFOs and the "Stack of Coins"

A burst balloon has caused many a saucer scare, but the invasion of Farmington, New Mexico, on Saint Patrick's Day 1950 was one of the most dramatic. The "saucers" began to fly about 10:15 A.M. M.S.T., and soon filled the air. In numbers estimated from 500 to thousands, for the next hour the gleaming saucer-shaped objects soared over the town, moving erratically at incredible speeds, darting in and out among each other in what one writer has called "the greatest exhibition of magnetic flight that has ever happened in this universe." [6] (See *Chapter ix.*)

The explanation is more prosaic. A Skyhook balloon had been launched that morning from Holloman Air Force Base near White Sands, New Mexico. Near Farmington, in the cold atmosphere at 60,000 feet the balloon had become brittle, burst, and disintegrated into hundreds of tiny pieces of plastic. Light as feathers, shining in the sunlight, they floated over the town and away [1, p. 106].

SUMMARY: (Enter concise summary of report. Give significance in final one-sentence paragraph. List instances at lower left. Begin text of report on AF Form 112-Part II.)

1. On 17 March at 1500 hours from the ramp in front of the Operations building at Kirtland AFB, an officer and three enlisted men observed three objects at an altitude of between ten and twelve thousand feet. At first glance the observers thought they were parachutes. This was ruled out because of a tumbling motion exposing silver and dark side alternately, leading the observers to believe them to be wing tanks from fighters in the area. This was ruled out when suddenly one object rose vertically at a high rate of speed disappearing into the scattered cumulus clouds over the field, the other two objects seemed to be descending, one toward the North, the other Northeast. The object descending toward the Northeast was observed for a period of 15 minutes disappearing into the mountains approximately 20 miles away.

2. Weather: Clear with scattered cumulus at 15,000 feet; visibility unlimited.

3. Wind: Calm.

4. No report was turned in to personnel at Kirtland AFB as the incident was not considered important until reporting personnel read of other reports of Unidentified Flying Objects in same area.

5. Pictures: None.

6. Size:

a. Capt. Chanchai: Size of desk.

b. T/Sgt. Miller: Size of desk.

c. T/Sgt. Keys: Size of fighter aircraft.

d. T/Sgt. Neumann: No estimate.

7. Shape: All observers, non descript.

8. Report indicates definite objects, unidentifiable to the observers, were in area. Information as to the type of weather forecasting activities, special projects etc., is necessary before report can be properly analyzed.

Headquarters Eighth Air Force

1. On 17 March 1950 at 1900 hours, an officer had time available from this command while on an administration trip and made the following observations from the road in front of the base operations building at Northwest AFB:

a. Captain Paul W. Wenzler, Headquarters Eighth Air Force. "I was watching aircraft flying in the eastern sky suddenly my attention was drawn to three objects at about ten to twelve thousand feet which at first glance appeared to be parachutes. I called the attention of the three soldiers seen to them. As we observed them I decided they were not parachutes but to guess the trailing and retarding motion exhibited ultra-modern silver and the idea that they were probably wing tanks jettisoned from fighters. I observed this idea when one of the objects suddenly arose vertically at high speed disappearing into the scattered cumulus clouds at 15,000 feet over the field. The other two objects which seemed to be carried at wind speed 50/60 miles per hour separated, one travelled North while the other travelled Northeast. I fixed my attention on the one going Northeast and watched it until it seemed to disappear behind the mountains approximately 20 miles away. I would estimate the size of the objects to be approximately that of a B-52 aircraft. I cannot describe the shape but can definitely state that the objects were not parachutes, balloons or reflectors used on weather balloons.

"The weather was CAVU except for scattered cumulus at 15,000 feet. The surface winds were calm."

b. T/Sgt. Lawrence E. Miller, Headquarters Eighth Air Force. "My observations were substantially the same as those of Capt. Wenzler except that the objects appeared to be of the size and shape of a desk, metallic in nature and moved about 100 mph."

c. T/Sgt. Alvin P. Neumann, 12nd Post Sq., 11th Bomb Group. "I have nothing to add except that the rapid rate at which the one object ascended was considerably faster than would have been possible if air currents were the motivating force."

d. T/Sgt. James G. Key, Headquarters Eighth Air Force. "The objects appeared to be about the size of fighter aircraft; as a matter of fact I first thought they were aircraft dog fighting in a tight spinning maneuver. When the one object arose vertically at high speed I realized that they were not fighters. I'd estimate their spread laterally at about 300 yards."

2. Comments of principal officers

a. The personnel submitting the observation are all officers of considerable experience and their reliability is beyond question.

b. There is no question but that three unidentified objects were sighted by the observers. Further, the observers stated that they were familiar with the radar reflectors used on some types of weather balloons and were sure that the objects were not of this type. Further information regarding activities of this area at this time and on this date would be necessary to analyze this observation.
