1. The Security Officer of the 1947th AACS Squadron, Wiesbaden, Germany, reports the appearance of unidentified targets on radar scopes operated by a GCA crew during the night of 7 July 1950. While directing the landing of a US aircraft at Wiesbaden Airbase, the operator of the GCA radar scope, noted at approximately 2120Z, the presence of a target in addition to the aircraft under control. This operator reportedly had a second operator observe and confirm the presence of the additional target.

2. The sources stated that after observing the new target for several minutes, it appeared to separate into 2 or 3 blurred individual targets, spaced 90° to 100° apart. The separate targets then seemed to move at a very high rate of speed in a counterclockwise motion on the scope. These targets appeared to be from 3 to 4 miles distant from the operators and at an angle too high for good target return. The targets were lost from sight at approximately 2137Z as the operators concentrated on the aircraft under control.

3. According to the two sources, the speed of the unidentified objects suggested the possibility of their being jet aircraft.

4. The Wiesbaden control tower operator was contacted after the observation, he stated that no jet aircraft were known to be flying in the area at that time.

HQ MATS COMMENT:

An airman of the 1947th AACS Squadron, occupying quarters in the town of Wiesbaden reported to the organization's Security Officer that he heard sounds similar to those made by low-flying jet aircraft at about 2200Z on 7 July 1950. The airman reportedly made this statement without advance knowledge of the radar contacts.
