SIGHTING REPORT

1 Names of observers:

20735 [REDACTED]

4180 [REDACTED]

2 Action taken

Reported to Stn Adjutant - RCAF North Bay

3 Age

WO1 Russell - 40 years

F/S MacRae - 39 years

4 Has observer seen flying objects before? If so describe where and when.

No.

5 Details of Military Experience

WO1 Russell - RCAF 13 years

F/S MacRae - RCAF 13 years

DETAILS OF OBSERVATION

1 Date - 12 Apr 52

2 Place - RCAF Station North Bay

3 Time - 2130 hours

4 Number of objects - 1 only

5 Direction in which first seen.

Due West of observers.

6 Estimated course and changes in course.

Approached mainly in a Southerly direction, and slightly East, then skidded to a stop, reversed direction and disappeared on a course 30° above its approach.

7 Estimated height and changes in height.

Unable to estimate.

8 Estimated speed and changes in speed.

Very great rate of speed - comparable to twice the speed of an F 86 seen at a lower level, and seemed to travel at a greater rate of speed on reversal than on approach.

9 Estimated distance from observer.

Unable to estimate.

10 Direction in which last seen.

Disappeared to the North.

Ambassador [REDACTED] visits Ontario cities

Ambassador [REDACTED] presently is on a tour of Southern Ontario which will take him to Windsor, Niagara Falls, Hamilton and Toronto. He addressed the Windsor Chamber of Commerce on April 17 and is scheduled to speak at a dinner meeting of the Toronto Board of Trade Club on April 21.

Comment. In his first official speech in Windsor since arriving in Canada in 1950, the Ambassador said that peace with security - not a phony peace - was the fundamental aim of U.S. foreign policy, not only because it makes sense but because it has historically made our country strong. He noted that the high standard of living enjoyed by the American people came without resort to aggression and because the people of the U. S. preferred to develop their resources, to share them with others through world trade, and to develop within their own borders a social and economic system which has withstood the tests of both time and adversity.

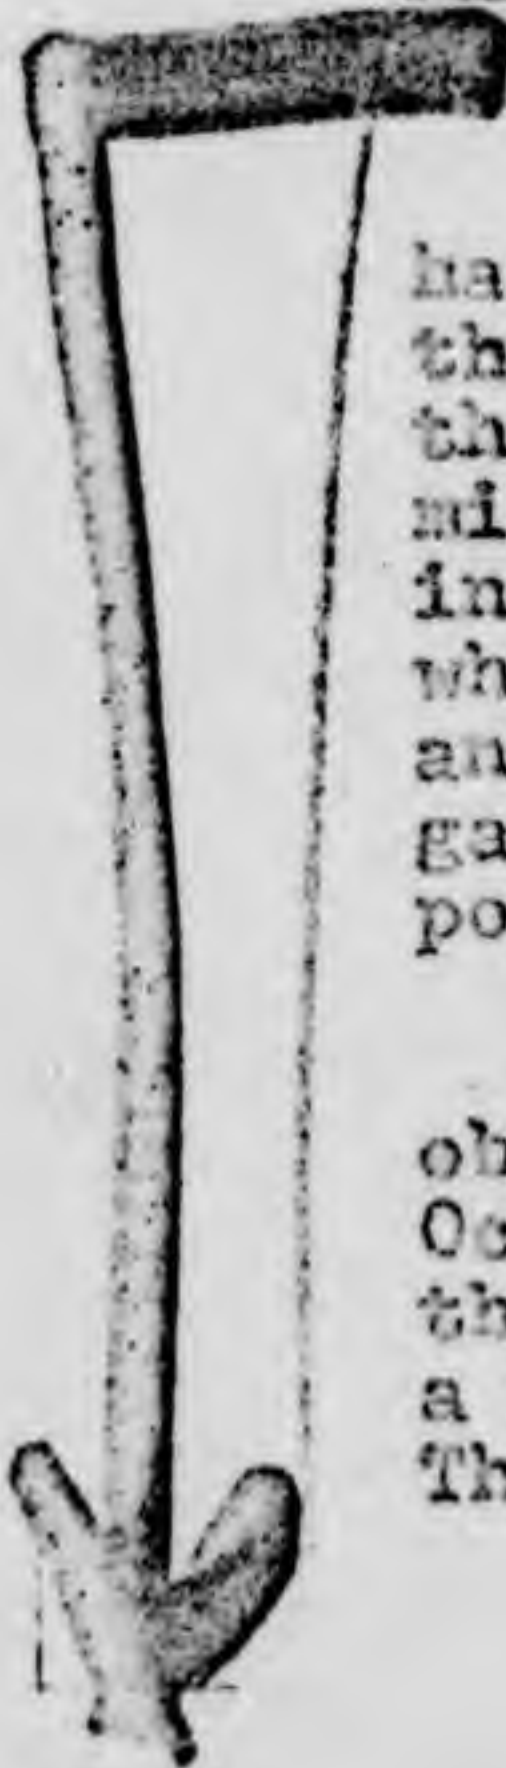

In Toronto on April 21, Mr. Woodward will speak on the pattern of foreign policy emphasizing that U.S. policies and actions are all part of a "grand design" aimed at protecting world security.

Flying Saucers Excite Interest

A report of the sighting of another flying saucer has stirred up considerable interest in the press during the past week. Two senior non-commissioned officers of the RCAF stationed at North Bay, Ontario about two hundred miles northwest of Ottawa, reported a "bright amber disc" in the sky which they observed for several minutes and which followed the usual pattern of changes in direction and intensity. The RCAF is conducting a routine investigation of their report but attaches no particular importance to it.

Comment. About 30 reports of sightings of mysterious objects have been reported during the past three years. In October 1950, after some investigation the RCAF accepted the conclusion of the USAF Project "Saucer" and adopted a routine procedure for the investigation of these incidents. The present flare-up of interest is notable in that senior-

St. Lawrence Seaway and Power Project

At a Washington meeting this week, President Truman and Canada's External Affairs Minister Pearson decided to proceed promptly to refer the question of power development on the St. Lawrence River to the International Joint Commission.

Comment. This action does not of itself indicate that the idea of joint development of the combined seaway and power project has been set aside since the way still remains open for Congress to approve the 1941 Treaty and set in motion plans for joint development by the U.S. and Canada.

The Canadian Government however, has been anxious to initiate proceedings at least on the power project, irrespective of eventual Congressional action, since such proceedings normally consume many months of hearings and the sooner they are started the better from the Canadian point of view. The power project, whether carried out by the Canadians or jointly, requires reference to the International Joint Commission since to obtain power it will be necessary to construct dams which may affect the level of waters in the river and are therefore a subject for consideration by the Commission.

The seaway would not necessarily require reference to the IJC. If the Treaty is approved by Congress, the seaway could and would be constructed as a joint project in either Canadian or American waters, or both, depending on decisions reached by engineers studying the problem. On the other hand, if the Treaty is not approved by Congress, the seaway could be constructed on the Canadian side of the river, as in the case of various existing canals, without requiring reference to the IJC unless it appeared that such construction would have some effect on navigation or water levels on the American side.

# *Flying Discs No Joke Now In Air Force*

The Air Force, which once laughed off flying saucer reports as products of over-ripe imaginations, today ordered its intelligence experts to study the cases of several discs reported over North Bay in the past four months.

Four airmen stationed at the North Bay base told their superiors they saw flying discs float silently over the local air station and an RCAF statement said there was no reason to doubt the statements.

All of the men were described as veterans with several years experience identifying conventional aircraft.

WO E. H. Rossell, a veteran airman with 13 years in the service, and Flt. Sgt. Reg McRae, a visitor from Weston, Ont., said they spotted a "bright amber disc" in the sky over the airfield around 8.30 p.m., Saturday.

The two said the disc came from the southwest, moved across the airfield, stopped and then took off in the reverse direction. It climbed at an angle of 30 degrees at "terrific speed" and disappeared.

WO W. J. Yeo, a master telecommunications superintendent, and Sgt. D. V. Crandell, an instrument technician, reported seeing a flying saucer the night of January 1.

"The saucer appeared to be at great height, probably outside the earth's atmosphere", they testified. "It appeared to be moving at supersonic speed."

Yeo and Crandell said they timed the object for eight minutes and 43 seconds and watched it move "roughly parallel to the earth". They said it changed direction slightly at times, "zig-zagging and climbing and diving without a sound".

The Air Force cagily declined official comment about the flying saucers whose existence at one time was investigated thoroughly by the United States Air Force and declared questionable.

# Can't Ignore Reports Of Saucers: Mackenzie

Continued from Page One.

If the disc seen over North Bay had completely reversed its direction as the airmen who saw it said, it couldn't have been a bright meteor or any other normal phenomenon, Dr. Millman said.

"Whilst caution is advisable, we must keep an open mind about them."

The average meteor is visible to the naked eye for only half a second, Dr. Millman explained, and the brightest for no more than three seconds. A January 1 report of a flying saucer over North Bay which was observed by two other airmen for a period of more than eight minutes obviously could not be a meteor either.

Today, Atomic Energy Control Board Chairman Mackenzie, who had been among the scientists who could not credit the first reports of flying saucers, said:

"It seemed fantastic there could be any such thing. At first the temptation was to say it was all nonsense, a series of optical illusions. But there have been so many reports from responsible observers, such as airplane pilots, that they cannot be ignored.

"It seems hardly possible that all these reports could be due to optical illusions."

What the flying saucers might be or where they came from, Dr. Mackenzie could not suggest.

On one point he was positive.

Many reports of flying saucers have come from New Mexico near the area where atomic experiments have been conducted. United States observers have wondered whether the saucers were the outcome of some atomic experiments, but the United States atomic control authorities said this was not so.

Dr. Mackenzie said he could give the same assurance for Canada. Nothing was being done

at Chalk River that would cause flying saucers or anything else to take the air.

Dr. Solandt said, "at the moment we are as mystified as anyone else."

Reports of unusual occurrences in the sky were passed on to the board from the services and other sources and when they appeared reasonably authentic were looked into carefully.

"There has been nothing yet to make us feel final conclusions are possible and it may be that as scientists we are harder to convince. At times we have felt the subject was closed and then new reports from the United States or elsewhere have been published and it has been reopened.

"We are keeping our minds open and studying the information that becomes available."

Others here noted a significant parallel between the two North Bay reports and the majority of those in the United States.

Preponderance of substantial reports of sky disc activity in the U.S. have occurred in New Mexico and Texas close to atomic weapon proving grounds and experimental stations.

Similarly North Bay is a mere 110 miles from Chalk River, site of Canada's big atomic energy projects.

The theory has been advanced already that, assuming the sky discs come from outside the world, they may have been sent by denizens of another planet to check on nuclear fission developments on earth.

The theorists infer the space men may be anxious over the possibility that atomic activity here may disturb the cosmos.

A German scientist now in the United States who was chief designer at a wartime rocket establishment has kept records of saucers seen all over the world. His conclusion is that they came from outside the world.

DIAN SCIENTISTS

# Can't Ignore Reports, Says Mackenzie

Solandt, Millman  
No Longer  
Complete Skeptics

BY JAMES MCCOOK and STEPHEN  
FRANKLIN of The Journal.

No longer scoffing, RCAF  
Intelligence and top Cana-  
dian scientists today were  
record as believing what  
ing saucers.

Their was a  
change of attitude from that  
of three years ago when  
"flying saucers", mysterious  
"discs" and "fireballs" speed-  
ing through North American  
skies were regarded as some-  
thing close to a joke.

The RCAF and Canadian sci-  
entific leaders spoke amid a  
flurry of reports:

1. The sighting by airmen at  
the new RCAF North Bay jet  
base of "flying discs", which  
Air Intelligence flatly declared  
could not be simply shrugged  
off.

2. Documentation by the  
United States Army Air Forces  
of some 30 different "flying  
saucer", "disc" and "fireball"  
sightings.

The RCAF said its intelligence  
was investigating, as a bona  
fide phenomenon, the case of the  
flying saucers.

Today, these were the "sau-  
cer" comments:

Dr. Peter Millman, Dominion  
Astro-physicist: "We can't laugh  
off these observations."

Dr. C. J. Mackenzie, chairman  
of the Atomic Energy Control  
Board and recently the President  
of the National Research Coun-  
cil: "These reports cannot be  
ignored as nonsense."

Dr. O. M. Solandt, chairman  
of the Defence Research Board:  
"We are as mystified as anyone  
else . . . and are keeping an open  
mind."

Enlarging, Astro-physicist  
Millman told The Journal:

"It is no good just laughing at  
these reports. We can't discover  
any conventional explanation  
which would cover the reported  
behavior of these objects."

Concluded on Page 16, Col. 6.

## RCAF Personnel See Flying Discs Near North Bay

North Bay, April 15. — In the wake of renewed interest in the flying saucer mystery, RCAF officials here today released two official statements from station personnel concerning the will-o-the-wisp discs.

The air force said that although the statements did not constitute an official RCAF view, there was no reason to doubt their validity, since the men concerned were veteran personnel, long familiar with conventional aircraft.

WO1 E. H. Rossell, an aircraft maintenance superintendent, and Flt. Sgt. Reg. McRae, said that last Saturday about 8:30 p.m. they were driving in a car from the married quarters area of the North Bay Air Station to the city.

Suddenly they spotted "a bright amber disk" flying over the field. They reported that the disk seemed to stop in mid-air, hovered for a brief time, and then zoomed away at terrific speed from the direction in which it had come, and at an angle of 30 degrees.

WO. W. J. Yeo, a master telecommunications technician with 16 years' RCAF service, said that on the night of January 1, he and Sgt. D. V. Crandell, an instrument technician, saw a reddish-orange ball move over the field at supersonic speed, at a height they judged to be outside the earth's atmosphere.

They watched the object constantly for a timed eight minutes and 43 seconds, when it disappeared. They said that the object travelled roughly parallel to the earth, "the direction altering slightly at times, zig-zagging and climbing and diving. "There was no sound."

WO. Yeo, who said that he was familiar with guided missiles, besides all conventional aircraft, claimed the object was definitely not an aircraft, a balloon or a meteor.

"Frankly, I don't know what it was, and for lack of better words, we called it a flying saucer," he said.

The reports have been sent to RCAF Intelligence.

## Awarded Prizes For Poetry, Essay

Kingston, April 15 (CP). — Awards of the Senator Davies Poetry Prize and the Whig-Standard Essay Prize for 1952 were announced today by Principal W. A. Mackintosh of Queen's University.

The poetry prize of \$500 goes to James Morris Souter of Kingston, a second year arts student, whose

## To Expand the View

## Educational Sees Issues

In a day when there is a great deal of confusion among educationists over the aims of education and an equal amount of debate and doubt about techniques, the province's patriarch of education is very clear in his thinking about both.

To Dr. John Dearness of London, Ont., a short, straight, scholarly gentleman approaching his 100th birthday, the aim and value of education is the expansion of human horizons. Evaluation of the benefits of education in terms of practical returns imposed automatic limitations.

Attending his 80th session of the Ontario Educational Association, the internationally known educationist, historian and botanist, yesterday drew this analogy to the process of learning. "When you climb a mountain, the whole value of the effort does not lie in the

1. The following report of sighting of an unidentified flying object is forwarded in accordance with the provisions of Dept of the Air Force letter AFOIN-C/CC-2, subj: (Uncl) Reporting of Information on Unidentified Flying Objects, dated 19 Dec 1951.

(a) Two veteran RCAF airmen reported seeing one bright amber disc in the sky. The disc came in from the Southwest, moved across the RCAF Station airfield at North Bay, Ontario, stopped, and then moved off again in the reverse direction. It then climbed at an angle of 30 degrees at terrific speed, and then disappeared.

(b) Object was sighted at 2230 (local time at North Bay, Ontario) on Saturday, 12 April 1952.

(c) Manner of observation was entirely visual. No equipment used.

(d) The two airmen were driving in a car from the married quarters area of the RCAF North Bay Air Station when the object was sighted.

(e) The two observers were Warrant Officer [REDACTED] a veteran airman with 13 years' service, and Flight Sergeant [REDACTED]. It is impossible to estimate the reliability and/or experience of the individual airmen until a more complete report is received from RCAF Intelligence.

AGC-8 600

1. The following report of sighting of an unidentified flying object is forwarded in accordance with the provisions of Department of the Air Force letter AFOIN-C/CC-2, subj: (Uncl) Reporting of Information on Unidentified Flying Objects, dtd 19 Dec 1951.

(a) Two veteran RCAF airmen reported seeing one bright amber disc in the sky. The disc came in from the Southwest, moved across the RCAF Station airfield at North Bay, Ontario, stopped, and then moved off again in the reverse direction. It then climbed at an angle of 30 degrees at terrific speed, and then disappeared.

(b) Object was sighted at 2230 (local time at North Bay, Ontario) on Saturday, 12 April 1952.

DOWNGRADED AT 3 YEAR INTERVALS;  
DECLASSIFIED AFTER 12 YEARS.
