SYNOPSIS

Investigation initiated by District Commander upon receipt of information concerning the observation of a round object, emitting red, green, and white light which was observed by ten (10) members of A.E.C. Security Force, Los Alamos, New Mexico, on 11 November 1952. Observers express opinion that object was a star.

Disclosure of the nature, sources, or even the existence of the information in this report to persons not normally entitled to such information may be made only when expressly authorized by the Director of Special Investigations, IG, or higher authority. Unauthorized disclosure of such information will be considered to be a violation of AFR 205-1.

DETAILS:

UNCLASSIFIED

1. This investigation opened at direction of the District Commander, predicated upon information furnished by DONALD P. DICKASON, Director, Security Division, Los Alamos Field Office, A.E.C., Los Alamos, New Mexico, concerning observation of unidentified aerial object.

2. On 11 November 1952, [REDACTED], [REDACTED], [REDACTED], [REDACTED], [REDACTED] (NMI) [REDACTED], [REDACTED], [REDACTED] and [REDACTED] - all members of A.E.C. Security Force, Los Alamos, New Mexico, reported they had observed an unidentified object over A.E.C. installation, Los Alamos, New Mexico. Reported sighting of object by aforementioned persons occurred between 2135 hours and 2300 hours, 11 November 1952, and sightings by the various individuals were made from their duty stations at widely scattered locations on the A.E.C. installation. Observers report the shape of the object - round; speed of object - practically motionless; sound - none; odor - none; altitude - no estimate; and color - red, white, and green (Alternating and bright). It was the opinion of all observers that the object in question was a star. Observers kept the object in sight from five (5) minutes to one and one-half (1½) hours.

1. The following information is being forwarded to your Headquarters for whatever action you may deem appropriate.

2. On Saturday, 15 November 1952 at 0240 hours, Captain [REDACTED], a Special Agent of 4th District, OSI, and a pilot with approximately 1000 hours including combat time, along with his wife, [REDACTED], observed an unidentified aerial object. The object passed over their house at [REDACTED] slightly to the East. The sound, which drew Captain [REDACTED] to the window of his home, as close as he can relate it, was similar to a flight of jets, six (6) or more, at very low altitude. However, on observing the position of this unidentified object, its altitude was estimated at 4000 feet moving in a southerly direction. All that could be observed was a white or pale blue light moving at a speed in excess of any conventional aircraft ever observed by the Captain or his wife. There were no wing lights; and from the angle first observed, a green, right wing, light as well as a white light should have been seen. The total time of observation was some seven (7) or eight (8) seconds before this craft made a left turn, to the south, that seemed normal and made an abnormal ascent of about a 45-degree angle. Even after the object made its turn, the white light was still observed but went out slightly after the object started climbing.

3. The weather at the time of observation was clear at point of observation with an overcast moving in from the west.

1. An unidentified object was sighted by two observers. It was described by one of them as a round blue light with an orange glow trailing it. The other one of the original observers described it as an orange light that moved in jerky upward sweeps of about 40° measured vertically. A third observer, called to witness this phenomenon by the first two, described the object as an orange glow moving north at a tremendous speed and rising.

1. An object was sighted by two observers. It was described by one of them, Major R.L. Wallander, as a round blue light with an orange glow trailing it. The other observer, A/3C Phipps, described the object as an orange colored glow averaging about three feet (3') in diameter and varying in shape. After watching the object a few moments Major Wallander sent Airman Phipps for Captain Belleman, so that the Captain might watch the object. The object was sighted by A/3C Phipps at an estimated (his estimate) 1400-1500 feet above and over the approximate center of the runway. It moved in jerky upward sweeps gaining about 40' in altitude with each sweep and pausing at the top of each sweep for 10-15 seconds. A/3C Phipps states that on each leap the orange glow was strung out behind the object like a comet's tail. The object disappeared toward the NW after about 5 minutes.

Major Wallander, who was standing nearby, apparently saw the object at a slightly later time. When he sighted it, the object appeared to be hovering over the Wichita Municipal Airport terminal building on a bearing of approximately 290° from his position and approximately a mile away. Major Wallander reports that the object was at an elevation of about 20° from him at the time. It moved to a position NW of the city of Wichita and then hovered for approximately two minutes. At this time the elevation of the object was approximately 40° with respect to the observer and the bearing had changed from 290° to 350° approximately. It hovered here for approximately two minutes, then moved to a position due north of Wichita and approximately 360° with respect to the observer and traveled out of sight on an approximate course of 360° and rising.

Captain Belleman arrived on the scene at the beginning of the last phase. He states that he saw an orange light moving north at what appeared to be great speed. When Captain Belleman arrived the light was at an elevation of 50° with the horizontal.

2. The sighting occurred at approximately 130225Z Nov and the object was under observation 5-7 minutes. In the TWX this was reported as 130215Z Nov, but it has since been established that Major Wallander's watch was 10 minutes slow.

3. The manner of observation was visual.

4. All three observers were located at a position about 30-40 feet SW of the SW corner of the Kansas National Guard Hanger, Wichita Municipal Airport, 37°33'45"N, 97°16'25"W.

5. The observers were:

Major R.L. Wallander, 11996A, Commanding Officer of the B-47 Transition Section II, who is a senior pilot current in both the T-33 and B-47 type aircraft and with more than 5,000 hours in the air.

Captain A.G. Belleman, AO 810202, a rated AOB, presently current in the B-47 as an AOB.

A/3C Dewey J. Phipps, AF 17353813.

Major Wallander and Captain Belleman are both thoroughly reliable and calm. Nothing is known as to Airman Phipps reliability. These men were interrogated separately. As will be seen there are the normal discrepancies to be expected in such a case, but their evidence is mutually corroborative in the main. Reliability rating A-1.

6. Surface winds were 333 at 16 knots. Visibility CAVU, high scattered cirrus clouds at 30,000. Winds aloft: 18,000, 265 @ 50 kn, 24,000, 265 @ 40 kn, 34,000, 265 @ 50 kn, 39,000, 235 @ 40 kn.

Continued.

7. There were two weather balloons released on the base at 120230Z, one at the Terminal Building and one at the south end of the runway. These balloons were of white nylon and each carried a flashlight with wet-cell batteries attached to the balloons with a 3' cord. The light is a bright white, and is small. This type of balloon ascends at ground level about 1200'/second.

8. There is no physical evidence.

*Down fast balloon!!!*

9. No interception action was taken.

10. Type aircraft in air at time object was seen were B-47 and T-33. B-47 aircraft were shooting landings. T-33 aircraft unknown.

A/3C Phipps was incorrectly reported in the TMX as A/2C Peebles. This was due to the fact that the airman could not be located prior to sending the TMX, having been off duty, and was mis-identified when inquiries were made at the motor pool.

STATEMENT

11. a. The object was elliptical in shape, single in number and blue-white in color when stationary. Movement was erratic and when motion was observed a red glow appeared opposite the direction. The glow seemed to trail the movement. Due to the distance from the observers, specific comment as to sound, aerodynamic features cannot be made. The object was observed for between 5-7 minutes. During that time it passed thru an area of 70° heading 290° to 360° and an area of 20° above the horizon to 50° above. The flight path was erratic. It was this fact that first brought the object to the observers attention. It moved at high speed and then stopped. It would reverse direction and hover. It remained north of Wichita motionless for approximately two minutes. It then moved another 10° to an approximate north heading and climbed away, disappearing at an angle of approximately 50° - see diagram

b. Time of sighting - 20:25 to 20:33

c. Manner of sighting - visual

d. Exact latitude of base - 37°38'N  
Exact longitude of base - 97°17'W

COMMENTS of Preparing and Approving Officer (same):

12. This report is considered significant because of the reliability and experience of Major Wallander and Captain Belleman, and because the trailing orange glow may indicate a method of propulsion. The weather balloons mentioned in this report were released at about the time of the observation, and, as will be seen from the listed winds, would have descended a path similar to the one observed. The light attached to each balloon and swinging at the end of a 3' cord might account for the jerky movement described by A/3C Phipps. None of these facts, however, explain the reported color or size, nor do they explain the apparent hovering of the light, as a weather balloon would be constantly rising at a gradually de-celerated rate.

DECLASSIFIED

11/3/52

ASTRONAUTICAL SOCIETY  
Grand Rapids, Mich.

November 1, 1952

Bulletin 52-1

Code: NP-newspaper, M-magazine; Q-questionnaire; I-investigated by A.S. personnel; INM-investigated by non-member of A.S.; E-evaluation by A.S.; Bib-bibliography of any published material on incident; ED-editorial note; A.S.-Astronautical Society.

Any future references to previously noted sightings will be prefaced by the same control number.

52-100 - (Q) Dayton, Ohio, July 28, 1952 - Approximately 4 a.m. a noise similar to that of low flying jet was heard. After noise had ceased, a bright, white light (described as similar to Mars in winter months (♂)) was observed moving fast from east to west in a clear sky. Light stopped and became stationary. A second light similar to first was observed approaching from the same direction but appeared to be somewhat lower. When second light appeared to be directly below first light, both headed northwest becoming smaller until disappearance. The observation took part in the northern half of the sky. Speed was estimated to be about as fast as a jet plane.

Wright-Peterson AF Base denied connection with phenomena - although they had been making photo tests up to 2 a.m. Subsequent check indicates that despite denial photo tests were still going on at 4 a.m. Bib: Dayton Daily News, July 29, 1952.

52-101 - (Q) Vicinity of Grand Rapids, Michigan, July 19, 1952 - Approximately 11:10 p.m. glowing object observed approximately 45° above western horizon. Apparent size of object was described as 2 1/2 to 3 feet in diameter. No dependable estimate on actual size or distance available.

Object described as appearing to circle erratically for about 10 minutes emitting a bluish-white light. No sound or exhaust observed. Object departed in northwesterly direction at high speed when Capital Airlines southbound flight 64 was first heard.

Sighter claims others saw same object - A.S. is still trying to obtain stories of other sighters. Bib: none.

52-102 - (Q-I) Vicinity of Rockford, Michigan, September 25 through 29. Five people described bright star-like object low in north-northeast sky slowly moving eastward during night. Object described as variously red, green and yellow colored.

Investigation showed this to be a star - this analysis was made upon personal observation of A.S. investigator.

7-3719-21

52-103 - (Q-I) Grand Rapids, Michigan, August 1948 between 9:30-10 p.m.  
A flat, circular shaped object observed in northeast moving silently and very rapidly southwesterly. Object had apparent size of a soft ball. Object was observed to suddenly and abruptly change course from southwest to northwest and appeared to disappear at great speed upwardly and northwesterly. Entire observation took place in so short a time that attention of nearby person could not be directed to object before its disappearance. Object was observed in clear sky, had bluish-green color. No trail or exhaust was noted although observer states that at the time he did not take careful note of this point. Observer states that object gave impression of very high but relaxed speed. ED: the observer in this case is well qualified to make observations and report by observer was careful and accurate. E-this sighting may well be a meteor.

52-104 - (Q-I) Guilford, New York, August, 1951. On clear day except for horizon clouds between 3 and 4 p.m. a smooth, shiny, aluminum sphere having apparent size of dinner plate was observed moving across and up sky. Although movement appeared to be gradual observer thought that actually it was rapid. Object appeared to move smoothly and silently - appeared to float. At one point it passed between observer and horizon clouds. The entire observation occurred in brief interval since observer states that as soon as seen observer called to his son but by then it was behind a building - by time observer had run around building it had disappeared. E-appears to be a saucer.

#### NOTES

One smelly monster report at Flat Woods, W. Va., the following NP articles are known to have been published: Wash. Daily News 9-19-52 and 9-22-52; Light balls observed by residents and police, Fairfax, Va. NP: Wash. Times Herald, 9-22-52; Wash. Evening Star, 9-22-52; Wash. Daily News 9-22-52; Wash. Post 9-23-52. Report of silver Christmas tree like objects observed near New Haven, Conn. NP: Manchester, N.H. 'Leader' 8-26-52. Objects observed by Ground Observer Corp., Sept. 8, 9 and 11 at Dover Plains, New York (jet chase claimed), NP: Poughkeepsie New Yorker 9-26-52.

The above notes are made so groups may obtain this material if they so wish.

(INM) A.S. has received the following report on the Florida-scout-master - burned clothing incident. The local power company states that at place and time of incident a high voltage line and transformer were burned out and circuit control relay failed to operate to open circuit. E: may be explanation of ball of fire, burned clothing and grass.

## Oddly Behaving Meteor Flurry Puzzles Experts in Southwest

By The Associated Press

ALBUQUERQUE, N. M., Nov. 9.—An unusual number of unusual meteors flashing through southwestern skies these autumn nights has the experts puzzled.

In the last eleven days, seven fireballs of exceptional size have zipped through the skies over a seven-state area. The Institute of Meteoritics at New Mexico University said that frequency has never been equaled in history.

"In fact," said Dr. Lincoln La Paz, head of the institute, "there has never been a rate of meteorite fall in history that has been one-fifth as high as the present fall. If that rate should continue, I would suspect the phenomenon is not natural."

The fireballs reported by observers in Arizona, New Mexico, Oklahoma, Texas, Colorado, Utah and Nevada do not behave like ordinary meteors at all, Dr. La Paz said. They travel in straight lines when they should follow a curved course. Frequently they are silent, although meteors of that size should make a definite noise. They have a greenish color, he said that has not been reported outside the Southwest.

One of the most unusual was the one that swept 125 miles in a straight line across Arizona Nov. 2. Seen also in New Mexico, Utah, and Nevada, the fireball vanished in a blinding flash somewhere in northern Arizona. There was no noise.

The most conventional was the one that struck near Oklahoma City Wednesday after being seen in New Mexico, Texas and Colorado. Although it was of the greenish color, it made a noise. Dr. La Paz said he hopes ground

parties will recover fragments of it. He noted that pieces are recovered from only one in ten large meteorites.

Yesterday's show in southern Arizona and New Mexico was described as perhaps the oddest of the series. Dr. La Paz said two objects, flying parallel, crashed near Cloverdale, N. M., in the southwest corner of the state, sending up a double mushroom of smoke. Again there was no noise.

"Such a case of two meteorites falling together without noise would be hard to duplicate in history," he said. "I don't know what to make of it. I'm almost inclined to ask those fellows out in Nevada (where atomic bomb tests have been held recently) what they are doing."

At Washington, the Defense Department was asked if the objects might be rockets or guided missiles fired from test areas at White Sands, N. M., or elsewhere. A spokesman replied the department knew nothing of any tests in the Southwest at the time the flying objects were seen.

### Light Seen in N. Y. Sky

MIDDLETOWN, N. Y., Nov. 9

(AP).—Scores of New Yorkers reported seeing a strange light streaking across the sky late this afternoon. Reports described it variously as "a ball of fire," a reddish "streak of fire," and a "pink streak" high in the sky that took a few minutes to pass from east to west.

The phenomenon was observed over a twenty-mile area from Middletown to Port Jervis, where police said an object with a bright head, leaving a trail, was seen for about three minutes, vanishing in the direction of Scranton, Pa.

**GEOLOGY STUDENT** Ted Chamberlain draws picture of fireball he saw while riding in jeep on night

on Nov. 4 (see story). Ball had deep green head, but shaded to lighter green and white toward tail.

## ● BY WALLACE A. SPRAGUE

**W**E FACE A MYSTERY of outer space even more arresting than the unsolved "flying saucers."  
*It is the mystery of the giant green fireballs.*

Nine of them flashed across the skies of the Southwestern U.S. late last year. Each vanished as though its light had been switched off. No trace of a single one has been found.

People here are used to "mysteries." They live next door to the super-secret atomic energy plant at Los Alamos. At the edge of town is the armed forces' Sandia Base, where the atom bomb is assembled. Across the state is the rocket laboratory of White Sands. They know what technical wonders our scientists can produce.

● But when they see a green ball bright as the moon streaking silently across their skies, *they know no ordinary event is taking place.*

● They know, too, that this is no "flying saucer" hoax, based on flimsy evidence from a few observers. Already, more than 165 separate written reports are on file concerning one giant fireball seen on November 2. Sober scientific observers are beginning to think that the answer to the fireball riddle may mark a milestone in our knowledge of outer space.

● *What is the green fireball seen only in our Southwest?* A brand new meteor — or something much more frightening, possibly long-

range guided missiles or even space vehicles?

One place to start unraveling the mystery is on a dirt road snaking across the New Mexico desert one Sunday night last November.

Overhead, stars glistened in the clear, light air. Along the rutted road trundled a rebuilt jeep at 25 miles per hour. Riding inside were three University of New Mexico students, Ted Chamberlain (above), a tall, lithe senior in geology, his friend, Gus Armstrong, owner of the jeep, and a third lad, Tom Debooy.

It was nearly 9, and the youths were returning from an antelope hunt on the San Augustin plains near Magdalena. In the rear of the jeep lay their kill, a medium-sized buck. *Suddenly, all three were blinded for a half-second.*

### The Jeep Ran Wild

**F**AR IN THE Northwest sky burned a giant green fireball falling fast at an angle of about 35 degrees. Its tail was whitish, but the ball itself was the radiant color of a green neon tube—or, as Chamberlain recalls, of copper burning in a laboratory burner.

● "Look!" yelled Armstrong. As he did so he lost control of the jeep, which hit a rut, vaulted a five-foot bank, and dumped its occupants on the gravelly desert. Overhead, the fireball silently vanished. Minutes later the three dazed young men re-started the jeep, and rolled on toward Albuquerque.

ported.

### "I Saw a Fireball . . ."

**R**AILROAD conductors are not excitable people. Neither are airline pilots. Yet the same night Capt. Grady C. Kelly and Thomas R. Ballard of Slick Airways watched the same fireball off the left wing of their DC-3 plane as they approached Kirtland field here.

● "We both commented at the time that it was by far the brightest meteor we had seen in 10 years of flying," Ballard said later.

● Elsewhere, a convalescent soldier, Bill Henderson, at Ft. Bayard, N.M., watched the ball of fire from his hospital window. An observant 12-year-old girl, Livinia Ann Rife, of Santa Fe, saw it and described its head as "rounded, bluish-green, with an orangy-red tail."

● Scientists at Los Alamos saw the display and reported on it. So did the Civil Aeronautics Administration's tower man at Truth and Consequences, N.M. So did Walter Haas, of La Cruces, an experienced observer of meteors. So did Julian B. Blue Jacket, a Navajo.

Some westerners blamed the collapse of a water tower at Tucumcari, N.M., (which killed four), on such a fireball. Investigation showed the flash seen at the moment of collapse came from short-circuited electric lines.

But to all who have seen them, sight of the great green fireballs flashing through the heavens is an unforgettable experience.

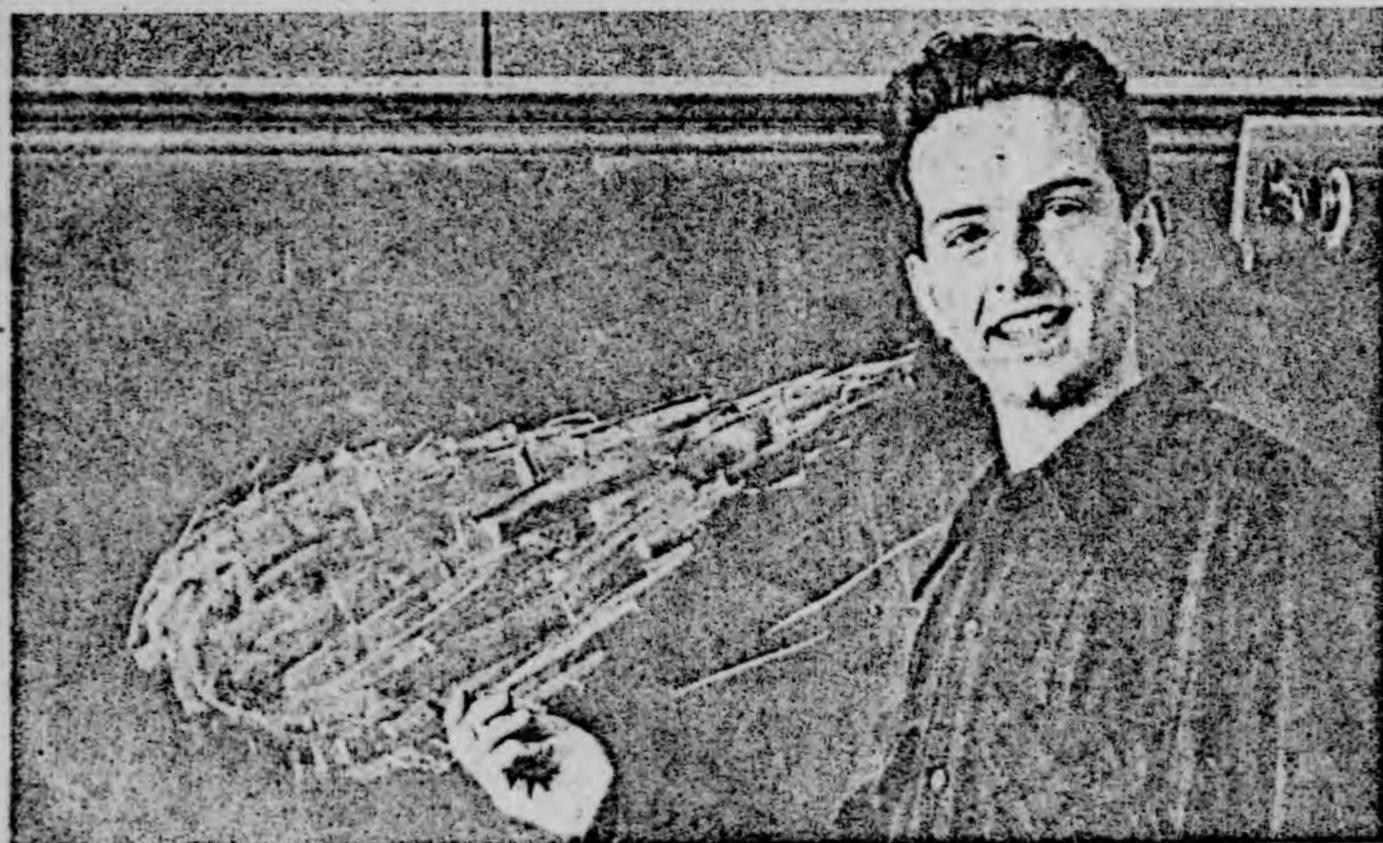

They, like thousands of other Americans here, have wondered what they are.

No government source knows—or if any does know, it isn't saying. That goes for the giant Atomic Energy installation at Los Alamos, and for the careful technicians at Sandia Base here. The Department of Defense is also mum, although various intelligence and scientific agencies of the government have shown interest in the fireball mystery.

*But one authority will speak.*  
He is Dr. Lincoln LaPaz, a friendly, intense scientist of world reputation who is head of

# Do green fireballs hint

GEOLOGY STUDENT Ted Chamberlain draws picture of fireball he saw while riding in jeep on night

on Nov. 4 (see story). Ball had deep green head, but shaded to lighter green and white toward tail.

● BY WALLACE A. SPRAGUE

**W**E FACE A MYSTERY of outer space even more arresting than the unsolved "flying saucers."  
*It is the mystery of the giant green fireballs.*

Nine of them flashed across the skies of the

range guided missiles or even space vehicles?

One place to start unraveling the mystery is on a dirt road snaking across the New Mexico desert one Sunday night last November.

Overhead, stars glistened in the clear, light air. Along the rutted road trundled a rebuilt jeep at 25 miles per hour. Riding inside were

● Something similar had almost happened two nights earlier.

● Lester Miller and his wife, of Palo Alto, Calif., had been driving east on Highway 60 near Globe, Ariz.

Not long after dark they, too, saw a great blue-green burst overhead. "It was so intense that I nearly drove off the highway. I was temporarily blinded," said Mr. Miller.

*This was no ordinary meteor display.* Watchers across a 1,000-mile span from Santa Fe, N.M., to Vista, Calif., watched the green fireball flame in the heavens.

Conductor J. B. Hale of a Santa Fe freight train was sitting at his desk aboard a caboese at Flagstaff, Ariz.

"One of the brakemen outside yelled for me to hurry up, for a terrible looking blue-green flash had just lit up the sky," he reported.

## "I Saw a Fireball . . ."

**R**AILROAD conductors are not excitable people. Neither are airline pilots. Yet the same night Capt. Grady C. Kelly and Thomas R. Ballard of Slick Airways watched the same fireball off the left wing of their DC-3 plane as they approached Kirtland field here.

● "We both commented at the time that it was by far the brightest meteor we had seen in 10 years of flying," Ballard said later.

● Elsewhere, a convalescent soldier, Bill Henderson, at Ft. Bayard, N.M., watched the ball of fire from his hospital window. An observant 12-year-old girl, Livinia Ann Rife, of Santa Fe, saw it and described its head as "rounded, bluish-green, with an orangy-red tail."

● Scientists at Los Alamos saw the display and reported on it. So did the Civil Aeronautics

comparable size fall with a roar.  
▶ They follow a straight line — where big meteors, penetrating our atmosphere, always have curved trajectories, concave toward the earth.

▶ Most unusual of all is their green color. The livid shades, as green as a traffic light or neon sign, are absolutely new.

"Conservative observers might pass off the green fireballs as merely Bielid meteors, which fall early in November," says Dr. LaPaz.

"Actually, they're like no Bielid ever seen before. Finding them with the Bielids is about like watching a 240-mm howitzer firing bright green starshells during a bombardment of red-hot B-B shot."

Such facts lead to one conclusion: if the green fireballs are meteors, they are of an absolutely new type. Their coming may mean that the solar system (including our earth) has lately reached a new corner of the universe where totally unexpected events can occur.

## GREEN FIREBALLS

may continue to fall! Should you observe one, write a description of the circumstances and mail it to:

Dr. Lincoln LaPaz, Institute of Meteoritics,  
University of New Mexico, Albuquerque, N.M.

And science may even have a hint of the "unexpected events."

For 15 years, Dr. LaPaz says, scientists have speculated on the possible existence of what they call "contraterrene" material.

Such material—if any could ever be found and handled, which is impossible—would look just like ordinary matter.

But it would be matter built backwards. Where the nucleus of ordinary atoms has a positive charge, its nucleus would have a negative charge. And where ordinary electrons have a negative charge, contraterrene electrons would have a positive charge.

This means just one thing: the instant contraterrene matter struck ordinary matter, a terrific explosion would occur!

—Could this be the explanation of the swift,

probably take place during a meteor shower, as suggested by Dr. Louis Ridenour in 1946. The missiles could appear to "hide" behind meteors, and so could not easily be detected by radar. Last fall's fireball display did occur during the annual visit of the Bielid meteor shower.

● **Fact 2:** Green fireballs have been observed only once before — in 1946, when they were reported seen over the Baltic Sea and Sweden. Military commentators then were quick to suggest that the Russians might well be testing advanced types of missiles captured from the Germans at their nearby rocket base of Peenemunde.

Suppose the green fireballs do give away some gigantic new secret of guided missiles or space travel? Who is responsible?

Again, because of the nearness of U.S. scientific centers, the temptation is great to say they're ours. But Dr. LaPaz says this: "If the Russians possessed missiles capable of intercontinental flight, it would be natural for them to make ranging tests over the Southwestern U. S., where we have important targets."

## Why They Disappear

IF THE Russians have such rockets, it would also be perfectly natural for these devices to be made self-destructing, so that we could find only tiny fragments of them."

How can we solve the riddle?

"We must try to do as we have done with countless celestial objects before," says Dr. LaPaz. "We must find a piece of one and examine it in a scientific laboratory."

● "We already know of several places to look. But to search effectively, we must have as many as 5,000 men, who can examine the 'strewn field' yard by yard, and foot by foot. And even then, if the fireballs are contraterrene matter, we shall have no success.

● "But if we do find bits of metallic alloy which could burn with a green flame, we may well have a piece of a green fireball.

● "And from this piece we can surely say whether it originated in space, or in some frighteningly advanced laboratory.

"For science, and for our own safety, we should make such a search soon." ■

**BUS-DRIVER** Bob Robbins (left, with wife) was piloting a Continental Trailways bus west of Gallup, N. M., at 3 a.m. one night in November. Through windshield he watched brilliant blue-green ball flare across night sky. Drivers in buses ahead and behind saw same display.

**AIR FORCE Lt. Col. J. P. Starkey** (above, with wife) watched fireball "like a parachute flare" while flying C-47 west of Roswell, N. M. Flame appeared brighter than the planet Venus at its brightest. Col. Starkey and co-pilot saw it die out suddenly in mid-air, leaving no trace.

**DIRECTOR** of religious goods center, I. A. Ladd, was so impressed by night fireball seen from Albuquerque street on Nov. 10 that he rushed home, wrote report to Dr. LaPaz at 2:10 a.m. He described the fireball as "the most brilliant something I've seen in my whole life!"

**BASEBALL COACH** George Baird of New Mexico Univ. (left) was leaning against backstop watching practice one day last spring when he spotted daytime fireball. He marked the position, later reported the sighting to Dr. LaPaz at the University of New Mexico Institute of Meteoritics.

7-3719-21

# secret space war?

the Mathematics and Astronomy department at the University of New Mexico here, and also Director of the University's unique Institute of Meteoritics (meteor studies). He says this:

**1** The green fireballs of 1951 could be a brand new kind of meteor.

Certainly they differ from ordinary fireballs - big meteors bright enough to cast a shadow and which usually end in an explosion.

They're different because:

- ▶ They are more brilliant - some reported much bigger and brighter than the moon. Ordinary fireballs are rarely this impressive.
- ▶ They are silent, where ordinary fireballs of comparable size fall with a roar.
- ▶ They follow a straight line - where big meteors, penetrating our atmosphere, always have curved trajectories, concave toward the earth.
- ▶ Most unusual of all is their green color. The livid shades, as green as a traffic light or neon sign, are absolutely new.

"Conservative observers might pass off the green fireballs as merely Bielid meteors, which fall early in November," says Dr. LaPaz.

"Actually, they're like no Bielid ever seen before. Finding them with the Bielids is about like watching a 240-mm howitzer firing bright green starshells during a bombardment of red-hot B-B shot."

Such facts lead to one conclusion: if the green fireballs are meteors, they are of an absolutely new type. Their coming may mean that the solar system (including our earth) has lately reached a new corner of the universe where unexpected events can occur.

traceless green fireballs? If it is, it would form one of the most dramatic scientific discoveries of our time.

But there is another possible explanation, Dr. LaPaz thinks:

**2** The green fireballs could be thrown by man-ominously enough in the form of guided missiles.

In the region of White Sands Proving Ground and the Sandia Weapons Base, such a hypothesis is tempting. But Dr. LaPaz does not endorse it. He does, however, offer two suggestive facts:

● **Fact 1:** Any tests of long-range guided missiles by friendly or enemy countries would probably take place during a meteor shower, as suggested by Dr. Louis Ridenour in 1946. The missiles could appear to "hide" behind meteors, and so could not easily be detected by radar. Last fall's fireball display did occur during the annual visit of the Bielid meteor shower.

● **Fact 2:** Green fireballs have been observed only once before - in 1946, when they were reported seen over the Baltic Sea and Sweden. Military commentators then were quick to suggest that the Russians might well be testing advanced types of missiles captured from the Germans at their nearby rocket base of Peenemunde.

Suppose the green fireballs do give away some gigantic new secret of guided missiles or space travel? Who is responsible?

Again, because of the nearness of U.S. scientific centers, the temptation is great to say they're ours. But Dr. LaPaz says this: "If the Russians possessed missiles capable of inter-continental flight, it would be natural for them

## THESE PEOPLE SAW THEM IN THE SKY:

BUS DRIVER Bob Robbins (left, with wife) was piloting Continental Trailways bus west of Gallup, N. M., at 1 a.m. one night in November. Through windshield he watched brilliant blue-green ball flare across night sky. Drivers in buses ahead and behind saw same display.

DR. LA PAZ, THE DIRECTOR of meteoritics at the University of New Mexico, is shown with wife. He is the man on the right. He was impressed by night fireball seen from Albuquerque on Nov. 13, 1951.

Handwritten notes in the right margin, including the number '14' and some illegible scribbles.

## HYDROGRAPHIC BULLETIN

Third Officer Barry W. Pillinger of the American S. S. *Alcoa Ranger*, Capt. Joseph M. Castro, Master, reports as follows:

"Among the large number of meteors observed on the morning of November 15, 1952, the following was the most unusual: At 0810 G. M. T., in lat.  $22^{\circ}22'$  N., lon.  $85^{\circ}13'$  W., a bright meteor originating in the constellation *Leo*, having a duration of 3 seconds, seemingly exploded in the region between *Leo* and *Ursa Major* with a brilliant flash which illuminated the entire area around the vessel. After the flash a large ring of reddish gas became visible at a sextant altitude of  $20^{\circ}$  and a true bearing of  $050^{\circ}$ . This ring gradually opened to the south into the shape of a horseshoe and remained plainly visible to the naked eye for 30 minutes, finally disappearing near *Alloth* in *Ursa Major*."

Weather clear, excellent visibility, wind NE. force 3, slight sea, barometer 29.92 inches, air temperature  $76^{\circ}$  F.

1. Mr. [REDACTED] sightings were evaluated as "possible balloon."
2. There is a U. S. Weather Bureau Balloon-launching site in Sacramento which possibly launched a balloon November 15, 1952 just prior to his sighting.
3. Re Mr. [REDACTED] May 20, 1953, sighting in Los Angeles. He states this object descended and came to rest directly over his head at an altitude of five feet. We are sure Mr. White is at least five feet tall, give or take a couple of inches, in which case it would have been sitting on his head. The object remained motionless for about five minutes at this altitude. It was described as the exact size of a "night football." It must not have frightened him because it wasn't reported until the latter part of 1954.

Dear Sir:

I am naturally curious about the report of psychic ops, which I previously reported to you, have ever been of any use or not.

This phenomena of the white light seems to relate to a psychic and direct intelligence. Over the years you must have collected other similar data and I am sure that your information has been of any use to you.

There is always the possibility that these subjects are covered with some type of white material and are sleeping in the interior. The unusual incident where a detectable electric field was gathered from the surrounding atmosphere and then taken away with the stone has always been a genuine puzzle to me.

Have you looked at any similar incidents anywhere, or could you tell me if the information which I gave you was of any value?

There must have been some reason for these things to happen and there is a thing in my life that I am sure of that connects these unusual events with anything. It has to do with the incident that the significance, if there is any, must be something for the U.S. Government, or else it is a very serious service to the U.S. It doesn't make any sense to me because I cannot see this incident. I do quite a bit of mathematical work involving the use of the laws of probabilities but I see this in connection with life insurance, and the possibility that someone will live or die.

The application of this information is entirely in the field of physics and astronomy. Can you think of anything at these points, or not?

~~\_\_\_\_\_~~  
John T. White

27 June 1958

Dear Mr. [REDACTED]

This is to acknowledge your letter of 1 June 1958 concerning the subject of unidentified flying objects.

The sightings you refer to have been evaluated as possible balloons. The long time interval between sighting and reporting these objects precludes a more accurate analysis at this time.

For your information, I am enclosing the latest Department of Defense Fact Sheet on the subject of unidentified flying objects.

Sincerely,

Incl

SUMMARY: (Enter concise summary of report. Give significance in final one-sentence paragraph. List inclosures at lower left. Begin text of report on AF Form 112—Part II.)

**SUBJECT: FLYOBREP**

In accordance with AFL 200-5, dated 29 April 1952, Subject: Unidentified Flying Objects Reporting (Short Title: FLYOBREP), the following report of Unidentified Flying Objects is submitted:

On 11 November 1952, 2220-2300 MST, Security Inspectors ,  and radio operator , all employed by the Atomic Energy Commission, Los Alamos, New Mexico, observed a round, bright object to the southeast of Los Alamos, New Mexico. The object appeared to be flashing from red to green alternately, apparently motionless about 5° above the horizon. The object was observed by three AEC employees from different locations on or near the AEC installation. The factor which attracted the observers was the changing of colors, somewhat like an aircraft navigation light, but much brighter and larger. The object remained in a near fixed position for approximately forty (40) minutes, then suddenly disappeared. There was no radar contact with this object.

Two unidentified objects were flying in the Canal Zone area between 2306Z on 25 November and 0449Z 26 November. Estimated speed of objects was 275 knots, with conventional maneuvers, flying between 1000 and 28000 feet altitude. Sightings were made by gun laying radar. Weather was clear with visibility unlimited. Unsuccessful interception was attempted by two B-26s, one B-17 and one FBM.

Two unidentified objects were plotted on gun laying radar in the Canal Zone area during the period 2306Z 25 November 1952 - 0249Z 26 November 1952. Unlike many reports of this type these objects maneuvered in a conventional manner at an estimated speed of 275 knots between 1000 and 20000 feet altitude. During the entire period the weather was clear with visibility unlimited and unrestricted. Two pilots reported visibility of 50 miles at 2000 feet altitude. Interception was attempted by two B-26s, one B-17, and one F4U without success.

A transcript of the log at the Air Defense Control Center is as follows:

SUMMARY: (Enter concise summary of report. Give significance in final one-sentence paragraph. List inclosures at lower left. Begin text of report on AF Form 112—Part II.)

SUBJECT: FLYORPT

In accordance with AFL 200-5, dated 29 April 1952, Subject: Unidentified Flying Objects Reporting (Short Title: FLYORPT), the following report of Unidentified Flying Objects is submitted:

On 11 November 1952, 2220-2300 MST, Security Inspectors , , and radio operator , all employed by the Atomic Energy Commission, Los Alamos, New Mexico, observed a round, bright object to the southeast of Los Alamos, New Mexico. The object appeared to be flashing from red to green alternately, apparently motionless about 5° above the horizon. The object was observed by three AEC employees from different locations on or near the AEC installation. The factor which attracted the observers was the changing of colors, somewhat like an aircraft navigation light, but much brighter and larger. The object remained in a near fixed position for approximately forty (40) minutes, then suddenly disappeared. There was no radar contact with this object.

Radar plots from 0450Z to 0452Z were known to be on AF2656 returning to BLB.

Another transcript of the log at the Air Defense Control Center is as follows:

1900R-25 Nov. to 0700R on 26 Nov

25 & 26 November 1952

Continued plotting. No positive identification of object. Last plot of unknown object at 0441Z. Changed condition yellow to condition white-guns tight as of 0552Z.

KENNETH W. DILLON  
 1st Lt. USAF  
 Controller on Duty

Captain Eugene D. BENCH, who was on duty at the Air Defense Control Center during the entire period, was interrogated on 26 November 1952. Captain BENCH reported the following:

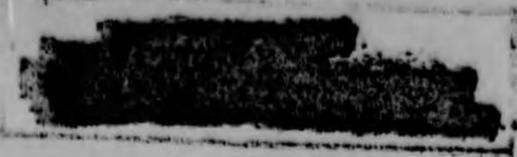

- 1300R - AAOC was asked to turn on radar earlier than normal to track a light aircraft on a direct flight from Marcus Galabert Airport to Colon Airport. The plane's course would be through the restricted area.
- 1306R - Plot was received from AAOC on a target which was considerably off the proposed course of the light aircraft. Flight plans were re-checked and it was determined that no aircraft was scheduled or authorized to be in that area. AAOC was asked if the target could be weather. AAOC replied that it was a definite target, ~~as soon as~~ fast to be a storm.

- 1315R - Tocucon Airport, Marcus Galabert Airport and Ft. Kobbe were contacted for information on any flight which might not have been previously reported. All three replied that all flight plans had been submitted.
- 1820R - Coco Solo Tower was contacted and they reported the light aircraft was in sight on the Colon Airport.
- 1825R - Yellow Alert was called
- 1830R - A B-17 taking off at Albrook Air Force Base was requested to proceed to the last target position to investigate the unidentified object.
- 1850R - AAOC reported that AAA had made two visual sightings. Unable to verify.
- 1900R - Targets continued to be plotted and B-17 and two B-26's were vectored to positions where targets had been plotted. No visual sightings were made from the air.
- 2349? 1140R - Last unidentified object was plotted.
- 0054 - Yellow Alert terminated.

Major James J. GABLE, AC563061, Commanding Officer of the 5700 Standby Flight with duty at France AFB reported the following:

At approximately 2330R Major Gable received a phone call from Coco Solo advising him that the unidentified objects were in the France AFB area. Major Gable walked outside his home and almost immediately sighted a light moving across his line of vision from East to West. The light was yellow in color, giving a soft glow like a fog light or a candle. The shape was rather vague but was definitely elongated and generally the shape and size of an aircraft fuselage. Altitude was estimated at 3000 feet. The light disappeared in the West in about three (3) seconds time. Major Gable stated that he was quite sure the light could not have been a reflection from a beacon or any similar light since he remained in the same position for some time trying to fix in his mind exactly what he had seen. No noise from the light was noted. There were scattered clouds at the time with visibility unlimited.

Weather recorded at the Detachment 11, 9th Weather Group station at Albrook AFB for the period is as follows:

The pseudo-adiabatic diagram plotted by the Weather Detachment at 2200R 25 November 1952 indicates an isothermal subsidence inversion between 5800 and 7600 feet. There was also a subsidence nearly isothermal inversion between 10,000 and 16,000 feet.

COMMENT of the Preparing Officer:

It is believed that due to radar units being slightly off calibration and due to delay in communications interceptors did chase their own tail or were sent to intercept themselves.

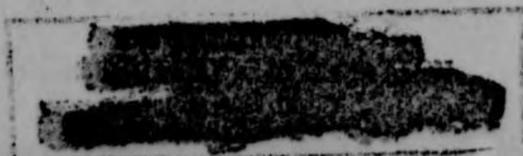

It is also believed that the majority of the radar plots were legitimate unidentified objects.

The preparing officer knows of no object which flies at 275 knots per hour, could remain in the Canal Zone area for nearly six hours, maneuver from 1000 through 23000 feet altitude, make no sound, and evade interception.

The inclosed Georef charts and grids should aid in plotting positions.

Sgt. Walters, U.S. Army

IR-70-52

IR-70-52 stated that two visual sightings were made in the Panama area at about 1850R 25 November 1952. At the time of this report verification could not be obtained.

Source, member of an Army anti-aircraft unit, was contacted on 3 December 1952. Source did see two objects at approximately 1850R 25 November 1952, however from the description, direction and altitude reporting officer determined that he saw the B-17 and the PBM which were attempting to intercept the unidentified object.

COMMENT of the Preparing Officer:

It was obvious that source had been well trained in observation. He knew what he saw, estimated directions, estimated altitudes, estimated size as well as exact time of sighting.

### AIR INTELLIGENCE INFORMATION REPORT

FROM (Agency)	REPORT NO.	PAGE	OF	PAGES
34th Air Division (Defense)	IR-22-52W	2	2	2

(1) Shape: Round  
Size: Similar to a large star  
Color: Red and Green (alternately)  
Speed: Stationary to very slight movement  
Maneuvers: None  
Manner of Disappearance: Suddenly disappeared  
Other Factors: Negative

(2) Approximately 2220 to 2300 MST, 11 November 1952.

(3) Visual observations.

(4) a. Outside Security Hq building AEC installation, Los Alamos, New Mexico.  
b. 2400 B Diamond Drive, housing area south of AEC installation, Los Alamos, New Mexico.  
c. Northwest corner of AEC installation.

(5) Observers reliability considered excellent. Two are employed as security agents and aerial spotters.

(6) Clear weather and normal winds aloft.

(7), (8), and (10) All negative.

The information given above is true and correct to the best of the observers ability and knowledge.

COMMENTS of Preparing Officers:

As stated by one of the observers, the object could have been a star, with the light filtering through a high layer of dust particles. This might account for the changing of colors. It is believed, as reported by two of the observers, the object remained stationary. No clouds were visible in the sky at the time of the sighting and other stars were visible, including the evening star. A complete check was made of balloon launchings in the western states. Assuming that the winds aloft were correctly estimated this object could not have been a balloon carrying a beacon or light. No aircraft were in the area at anytime within several hours of the sighting.

I thought that it was a plane coming in for a landing the motion at the time I first saw it was very slow and there was a change in color, from bright white to red & green, the same effect as when a plane is sighted flying at a slight angle from you, so that the distance between the light could not be determined yet the light from the wing light could be seen. The object then seemed to remain stationary, and later moved a little to the south. The object was still in the sky at the time I was relieved from duty, and left the area.

At approx 2230 station 532 reported a bogey at the SE corner of project. I observed bogey and concluded it was a star, bearing about 140° X 5° above the horizon. The star was flashing red & green and could have been mistaken for running lights of an aircraft. This star is available for interested observers most any clear night at this time of year.

At 2220 MST hrs on 11 Nov. 1952 I received a radio report from a patrol in the field of a flashing light which he believed was a bogey. Other reports were received, some of which stated the object was a star. Upon being relieved from duty at approx. 2300 MST, I came out of the building with Sgt [REDACTED] and we observed an object in the east flashing red & green. When I arrived at my home, I pointed this object to my wife and we both observed for a period of about 15 minutes. After this period of time, while my head was turned for a moment, the object disappeared and we did not sight it again before retiring, approx 30 minutes later.
