AIR INTELLIGENCE INFORMATION REPORT

CG 10th Air Div (Def) APO 942 10AD-4-53 FAGE 2 OF 2 FAGES

At approximately 13/04552 February 1953 an unidentified red light was sighted in the vicinity of Elmendorf AFB by the following members of the 39th Air Police Squadron: A/2C DARCE R. CDCM, AF 18356875, A/2C JEWELL W. WILLINGHAM, AF 18 396 441, A/3C AUGUSTUS J. WORMUTH, AF 23 746 279, A/3C ROPERT A. WOOD, AF 27 011 420, and A/B NORMAN S. MOTTS, JR, AF 12 342 976.

The object is described as a large red light, estimated to be thirty-six (36) inches in diameter from a distance of 3/8ths of a mile and an altitude of 1500 feet. Its shape was not clearly defined, but appeared to be round. It emitted no sound nor were there any discernible trails of exhaust patterns. Meather at the time of the sighting was a measured 5500 feet overcast, visibility 10 miles, wind 15-16 knots from 170 to 185 degrees.

The object first appeared approximately at the west end of runway 05. At the time of the initial observation its altitude was estimated to be 1500 feet. However it was described as climbing gradually and was traveling at a speak a little slower than a jet. The object continued in a southwesterly direction and crossed Anchorage to a point just beyond the city limits when it circled to the west to a position out over the middle of knik arm, but on a line with the city.

One fighter intercepter was acrambled in an effort to intercept. As the jet became airborne there was a noticeable increase in the speed of the object. When it reached a point midway across the arm, the light climbed vertically at a speed far in excess of any jet observed by the airmen and disappeared from sight. The fighter reported no contact at any time. A nearby radar site was alerted and was operational during the entire period but reported no sighting.

The duration of the sighting was five (5) to ten (10) minutes. No weather balloons were released during the period. All airmen have previously observed falling stars and declared the sighting did not resemble such natural phenomenon. A similiar sighting was made the previous evening, see 10AD-3-53, but was unknown to the airmen.

COMMENTS of Preparing Officer:

All persons who could have knowledge of this sighting have been interrogated. The light still remains unidentified.

SUMMARY: (Enter concise summary of report. Give significance in final one-sentence paragraph. List inclosures at lower left. Begin lext of report on AF Form 112-Part 11.)

A large red light, approximately thirty-six (36) inches in diameter, was reported by six Air Policemen at 18/0455Z Feb 53 as crossing Elmendorf AFB and the city of Anchorage, and then disappearing in a vertical climb. No identification has been established.

> The following night, about 8 p.m., five Air Police on patrol spotted the same-or another-red light near the end of one of the Elmendorf runways. By comparing it with known lights at the base, they judged it to be similar to a Stringle light seen. from 24 mile away. It was in a gradual climb, at about jet speed, heart of for Anchorage. The Air Police called the tower, It had nothing on radar, but ordered up a jet to intercept. As the jet became airborne, the object showed a noticeable increase in speed, and when the jet came around to get on an intercept course, the light climbed vertically into the overcast at 5,500 feet.

The Air Police did not know of the original sighting when they made their report. A careful check showed no balloons in the area. Stars and planets were eliminated because the first night the object was below the horizon, and the second night there was a solid overcast. If it had been a conventional craft. the radar should have picked it up. If it had been a stray balloon that wandered in from some distance, on the first night the C-47 should easily have closed on it and passed it. On the second night, its sudden vertical rise disposed of the drifting balloon theory.
