SUMMARY: (Enter concise summary of report. Give significance in final one-sentence paragraph. List inclosures at lower left. Begin text of report on AF Form 112—Part II.)

At approximately 1510 EST, 21 March 1953, the following information was received by this station (P-49) from GOC Post # PN 00 Black, located at PN 0408, Elmira, New York:

GOC Post # PN 00 Black, Elmira, New York, notified this station that an unidentified flying object was observed at 1505 EST, 21 March 1953. There were six (6) disc type objects spotted directly overhead moving rather fast at a very high altitude. There was no special formation other than being close together, heading in a northerly direction. Observers, Mr. Holup and Mr. Jack O'Neil of GOC, Elmira, New York, spotted these objects with use of binoculars, but only for several seconds. Special information requested by your headquarters is as follows:

Winds were from 180 degrees at 10 knots per hour. Observers did not notify this station that the investigating aircraft were noticed. It was assumed that they did not sight them. Negative aircraft were in the area, so it was not possible that the jets actually caused the report. Negative jets were in area of sighting at time of sighting. Two aircraft were sent down to investigate but found no joy.

The authenticity of this report is unknown since observation was for such a short period of time - several seconds.

These objects were not picked up on radar at this site at any time.
