FORM
FTD SEP 63 0-329 (TDE) Previous editions of this form may be used.

Details: At approximately 1500 CST, 26 August 1953, the 1703d ATG Intelligence Officer was notified by the MCAMC Intelligence Officer of the report of five separate unidentified flying objects observed by Mr. [REDACTED], Mrs. [REDACTED], Mr. C. [REDACTED] [REDACTED], Mr. [REDACTED] and [REDACTED], and Mrs. [REDACTED]. The dates of the sightings were from 31 July 1953 through 17 August 1953, inclusive.

The Intelligence Officer of the 1703d ATG conducted an investigation and obtained the following statements from the observers:

On 31 July 1953 at approximately 2000-2030 hours local time, Mr. [REDACTED], a grocer in Crocola, Alabama, was on his way home from Crocola heading North on hiway 43, when he sighted the flying object. The object appeared into his field of vision through the windshield of his vehicle from the Southwest, crossed the hiway and disappeared to the Northeast. The object was traveling at a high rate of speed and at a fairly high altitude. The object glowed a bright reddish fluorescent color and duration of sighting was for only a few seconds. No sounds were associated with the glow and did not appear to resemble a meteor or a shooting star. The location of the observer at the time of sighting was about one mile North of Crocola, Alabama, latitude 30 degrees 56 minutes North, longitude 88 degrees 32 minutes West. Reliability B-3.

[REDACTED] On 1 August 1953 at 2030 hours local time, Mrs. [REDACTED] was getting into her vehicle when she sighted the flying object. This object was on the west side of hiway 43 heading from the Northeast to the Southwest at a high rate of speed. She could not estimate the altitude other than stating that it was at a fairly high altitude and that the object was not too far away from where she was standing. She stated that this object appeared to glow a reddish color in the leading part and a dull amber color in the remaining part. Light did not resemble a meteor or a shooting star and no sound was associated with the light. Duration of the sighting could not have lasted more than two or three seconds. Location of the observer at the time of the sighting was in Crocola, Alabama, latitude 30 degrees 56 minutes North, longitude 88 degrees 02 minutes West. Reliability B-3.

On 2 August 1953 at 0030 hours local time, Mr. [REDACTED], Methodist Preacher, was on his way home from Crocola to Satsuma, Alabama when he sighted the flying object. It glowed an amber color overall with the brightest glow on the leading edge which appeared to be curved like the circumference of a basketball and gave the appearance blurred and tapered toward the rear. The object was heading from the North to the South in straight and level flight parallel to hiway 43, on the East side, at a high altitude. Subject stated that he could not estimate altitude so he guessed that it was 6-8000 feet high. It appeared to be fairly large in size with no sounds associated and traveling at a high rate of speed. Speed was estimated to be much faster than the jet aircraft seen in this area. Individual stated he has knowledge of Meteorology and that the object was neither a meteor nor a shooting star. Observer did not see or hear any aircraft in the area at the time of the sighting. Location of the observer at the time of the sighting was at Gunnison Creek, approximately one mile south of Crocola, Alabama, latitude 30 degrees 52 minutes North, longitude 88 degrees 02 minutes West. Reliability B-2.

On 2 August 1953 at 1630-1730 hours local time, Mrs. [REDACTED] was sitting in her back yard when she sighted the flying object. It appeared to be shaped like a parabolic or a balloon in descent, with the top half tapered to a point at the bottom. It was traveling at an angle rate of 45 degrees from the horizontal to the vertical to the Southwest. Still in descent, the object gave off a bright reflection caused by the rays of the sun striking it and also giving it the appearance of spinning while descending. Object appeared small due to the high altitude.

STATEMENT OF
[REDACTED]
CREOLA, ALABAMA

On 1 August 1953 at 20:30 PM local time, I was just gettin into my vehicle when I saw the object in the sky. It was on the West side of Hiway 43 heading in a SW direction. I could not make out any shape to it and the only thing that I had noticed about it was the variation in the color of the lights. It appeared to be glowing a reddish color in the leading part of the object and a dull amber glow in the rear part. It was traveling at a very high rate of speed and the duration of the sighting could not have lasted two seconds before it disappeared to the SW. I could not approximate the altitude although what I did see of it seemed fairly large in size. There was no sounds associated with the light and I did not see or hear any aircraft in the area at the time of the sighting. It appeared to be going in a straight and level flight.

and distance from the observer. No sounds were associated with this object and the duration of sighting was less than a minute. Individual did not see or hear any aircraft in the area at the time of the sighting. Location of the observer at the time of the sighting was southwest of Satsuma, Alabama, latitude 30 degrees 50 minutes North, longitude 88 degrees 05 minutes West. Reliability B-4.

On 17 August 1953 at 2055 hours local time, [redacted] and [redacted] were looking for the Little Dipper when they saw the flying object. It appeared as a bright reddish glow heading from the North to the South and parallel to highway 43, on the East side. Object was traveling at a high rate of speed and at a fairly high altitude. Both observers agreed that this object far exceeded the speed of jet aircraft they had seen in this area. Duration of the sighting lasted for approximately three seconds. Neither of the observers saw or heard any aircraft in the area at the time of the sighting. There was no sound associated with this object nor did it appear to be a meteor or a star. Location of the observers at the time of sighting was in Satsuma, Alabama, latitude 30 degrees 51 minutes North, longitude 88 degrees 03 minutes West. Reliability C-3.

Reliability of observers is as stated above.

No interception was attempted since the sightings were late in being reported.

The weather is reported as in Inclosure #7.

FOR THE COMMANDER:

HARRY GRIFFIN
Major, USAF
Intelligence Officer

Evaluated as part with (mention) because of the existence
at the time of sighting of a "meteor shower".
