<b>10. BRIEF SUMMARY OF SIGHTING</b> One reddish to bright amber obj which varied in shape fm circular to a cigar or pinpoint of light. Obj was abt about size of dime at arm's length & seemed to elongate at times & had depth. Erratic pendulum movement (E-W, up-down) was noticed. Light intensity of obj decreased as obj gained alt. Intense light clearly different fm visible stars. Obj was initially sighted at approx 70 sgr elevation in a northeasterly direction. Viewed visually for 1 hr still visible in approx same position when source stopped.		<b>11. COMMENTS</b> Description of sighting could conceivably conform to criteria for an astro (star). Mars in East at 30 sgr elevation.
