Dear Sir:

I do not know to whom I should write this letter but the air base seemed the best place. This morning around four o'clock my mother saw, what at first glance looked like a star, but when we looked closer we could tell that it was not. It was much brighter and larger than a star and was giving off rays. It stayed stationary in the east from our house until around five we noticed it had moved further east and a little south.

This is the third time we have seen such an object in the early hours of morning although I don't remember the others giving off rays or light as directly as this one.

during the Christmas holidays of 1955.

We are also very interested in the rays of light given off by this object because at one time this morning we were standing outside under a tree watching it when some rays came directly at us; although we didn't realize this until the area around the tree limbs above our heads lit up for about a second or two; therefore engulfing us also.

If you can tell us anything about this object we would appreciate it very much.

Sincerely yours,

Idona, Arkansas
