10. BRIEF SUMMARY OF SIGHTING One round object appearing as a white luminous cloud at estimated 36,000 ft observed to move at a slow rate of speed from NW to SE. Cloud appeared to spread at the center, at which time a bright reddish-orange ball appeared with flames shooting out from the sides. Assumed the shape of a donut and retained this configuration while drifting on a course due E of Misawa. Amature astronomer with group observing phenomena at first assumed object to be spiral nebula.		11. COMMENTS Probable cause of this sighting was a weather balloon which reached an altitude sufficient to cause it to explode and the following phenomena attributed to water vapor released at the time of explosion. The cloud was illuminated by the moon, which itself was 88% illuminated. Wind direction conforms to direction of the object.
