7. LENGTH OF OBSERVATION 2 sec	8. NUMBER OF OBJECTS one	9. COURSE W-S		
10. BRIEF SUMMARY OF SIGHTING At about 1900 the witness observed a bright blue light in the western sky with red around the edge. It was reported to be at about 30° elev and angling toward the ground at tremendous speed. Moving toward the S. Object fell to ground 2 or 3 blocks away. No sound or explosion.		11. COMMENTS Highly probable that witness observed a meteor. It is possible for the tail or trail to be so faint that they are not observed in conjunction with the object itself. Object moving too fast for a/c, and appeared to fall to earth near witness.

BRIEF SUMMARY OF SIGHTING: At about 1900 on 21 Oct 1960 the witness observed in the western sky a bright blue light with red around the edge. It was reported to be approximately  $35^{\circ}$  in elevation and was angle down toward the ground at tremendous speed. The object was moving from the west toward the south and disappeared at the horizon. The object was reported to be as bright as the stars and to have been in sight for two seconds.

EVALUATION: CASE CATEGORY: Possible Meteor. (1 witness)

CONCLUSION: This is a one witness sighting, but it is highly probable that the witness observed a meteor. It is possible for meteors to all be found that they are not comet. The object appeared to be moving too fast to be comet.

SUBJECT: Extract from Duty Officers' report

TO: AFCT-5-452 (Major Friend)

On [REDACTED] Ohio (Phone [REDACTED]) called at approximately 1110 hrs to report that his ten year old son, [REDACTED] had seen a large, bright object fall from the sky in [REDACTED]. It landed to [REDACTED] the boy said he was looking south when he saw the object fall - it fell straight in front of him at a "terrific speed" - not more than two or three blocks away. He heard no explosion.

This is the sum total of information that I could get from [REDACTED]. I called everyone listed in the instructions but only the weather service could supply a possible clue. One of their balloons fell about 1000 hrs (parachute failed to open) but according to the operator, it was estimated that the balloon fell near Springfield.

*John G. Ladd*

At 1150 hours 24 October 1960, TSgt Bellou called [REDACTED] the witness, and the following information was secured:

While facing south, a great big light, blue with red around it, was seen in the western sky. It was about 35 degrees elevation, and angled down in its descent toward the south, where it disappeared. There was no tail observed. The brightness of the object was about that of the stars. The object was in view for about 2 seconds.

Xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

There have been no other reports of this object being seen, and the boy was by himself. From the information reported, it appears that the object was a meteor.
