7. LENGTH OF OBSERVATION 8-10 min	8. NUMBER OF OBJECTS one	9. COURSE S-N
10. BRIEF SUMMARY OF SIGHTING Elliptical object, size of baseball (larger than the evening star), color similar to star, but very bright. Object was traveling on a steady course, weaving slightly and it was very bright. Object was steady in the front with a slightly weaving motion in the rear. First appeared on an azimuth of 180°. It seemed to disappear on an approx heading of 360°.	11. COMMENTS A check with Spacetrack confirmed that the object was the satellite Echo I. /	

City Will Get Better View Of Satellite

Echo I, the satellite that people have been peering at since it was sent aloft early last summer, will become easier to see this week and next as it passes over Dayton, according to Gerhard Levy, Moonwatch director.

It is visible for only a few minutes now since it glides into the earth's shadow shortly after it rises out of the horizon.

Here is a list, compiled by Levy, of the best times to watch it this week:

Today—6:13 p.m., moving northwest out of the southwest; 9:15 p.m., moving northeast out of the west.

Tomorrow—5:48 p.m., moving northeast out of the southwest; 8:13 p.m., moving northwest out of the west.

Wednesday—7:17 p.m., moving northeast out of the southwest; 9:19 p.m., moving northeast out the west-southwest.

Thursday—6:48 p.m., moving out of the southwest and entering into the earth's shadow directly overhead about 6:55 p.m.; 8:51 p.m., out of the west.

Friday—6:19 moving southeast out of the southwest; 8:25 p.m., moving out of the west (can be seen only a short time.)

Saturday—7:54 p.m., moving out of the west.

REPLY TO
ATTN OF: ABDO

SUBJECT: Report on Unidentified Flying Object (UFO)

to: Aerospace Technical Intelligence Center (AFCIN 4E2X)
Wright-Patterson AFB, Ohio

In accordance with AFR 200-2, paragraph 15, dated 14 September 1959,
the following Flying Object Report by MSGT [REDACTED] is submitted:

a. Description of the object:

- (1) Shape - Elliptical.
- (2) Size - Baseball (larger than the evening star).
- (3) Color - Similar to star, but very bright.
- (4) Number - 1
- (5) Formation - N/A
- (6) Discernible features: Object was traveling on a steady course, weaving slightly and it was very bright.
- (7) Tail or Trail - None observed.
- (8) Unusual Features: I have observed other UFO's and satellites but this one was not as stable as previous ones.

b. Description of Course of Object:

(1) When I first noticed the object, I thought it was hovering over the Base Radar Station so I watched it in this position for a while. I looked at my watch and it was 1810C, 19 November 1960. Soon the object started to move from south to north traveling at a very fast speed. I observed it to make sure it wasn't an aircraft. I called my family and [REDACTED]'s family (Rated Pilot) to look at it. I also reported it to the Tyndall Base Weather Station.

(2) Angle or elevation and azimuth of object: I first noticed the object coming on an azimuth of 180°.

(3) Angle and azimuth of object: The object seemed to disappear on an approximate heading of 360°.

(4) Description of flight path and maneuvers of object: The object traveled, it seemed, from south to north. It was steady in the front with a slightly weaving motion in the rear and traveling on a straight course.

(5) Manner in which object disappeared: The object disappeared instantly.

(6) Length of time object was visible: The object was visible about eight or ten minutes.

c. Manner of Observation:

(1) Method used in observation: Ground-visual.

(2) Optical Aids: N/A

(3) Aircraft used: N/A

d. Time and Date of Sighting:

(1) 1010 hours, 19 November 1960.

(2) Light conditions: Night

e. Location of Observer: Capehart, Tyndall AFB, Florida.

f. Identifying information on observer:

(1) Civilian: N/A

(2) Military: ██████████, MSGT, ██████████ (Training Section).

g. Weather and Winds: Aloft conditions

(1) Clear
