		11. COMMENTS Objt responsible for sighting was probably a meteor. There is also possibility that inversion in area contributed to misidentification. Witness reported objt was thought to be Echo I but was moving too slow, yet it was in sight only 1 min fm horizon to horizon while Echo usually is in sight approx 20 min over a similar path.

Analysis and Conclusions: THE OBJECT RESPONSIBLE FOR THIS SIGHTING WAS PROBABLY A METEOR. THERE IS ALSO THE POSSIBILITY THAT THE INVERSION IN THE AREA CONTRIBUTED TO THE MISIDENTIFICATION. WITNESS REPORTED THE OBJECT WAS THOUGHT TO BE ECHO I BUT WAS MOVING TOO SLOW YET IT WAS IN SIGHT ONLY 1 MINUTE FROM HORIZON TO HORIZON WHILE ECHO USUALLY IS IN SIGHT APPROXIMATELY 20 MINUTES OVER A SIMILAR PATH.
