10. BRIEF SUMMARY OF SIGHTING Orange-yellow, star-like objt. Traveled very fast. Much like a bright star such as Polaris.			11. COMMENTS A check with the American Ephemeris as to time of sunset and moonrise indicates that description of sky conditions is in error. Sun had just set 17 min prior to time of sighting, yet witnesses reported there was a bright night with bright moonlight and many stars showing. If sky conditions were as reported, time of sighting had to be an hour or more later than that reported. If time reported is correct, objt could have been a high flying a/c flying along Airways Amber 4, running N and S over Temple, Texas.

Three lights always in same relative position to each other. Appeared in North and disappeared in East. Speed constant. Slight dip in flight path, but direction remained the same.		11. COMMENTS The object of the sighting was in all probability an a/c. Sighting was at night and only lights were visible. The witness indicated that it was a bright night, yet the moon was only 0.28 illuminated as viewed from the Earth and it was low on the horizon. No evidence that would indicate that this was not misidentification of an a/c.

On the 4-6-61 I went out to [redacted] house to see [redacted] who were visiting her. About 15 until 15 [redacted] and I walked out of the house and down the drive way. We were looking at the stars and I thought I heard a rabbit or something in the bushes and so I looked around. When I didn't see anything I glanced up at the sky and then was when I saw it. We watched it for a while and then we ran to the house to get [redacted] and her mother. When they came out the object was a lot closer.
