10. BRIEF SUMMARY OF SIGHTING Star like objt was observed for 3 min by witnesses in Fairborn, Ohio. Objt was described as fuzzy or blurred and about size of a marble at arms length. Witness stated she first thought objt to be satellite Echo. Witness observed objt zenith fm a prone position. Course of objt was generally to S.		11. COMMENTS No positive conclusion can be reached in this case due to lack of substantial data and fact that exact positions of all a/c in area cannot be determined for specific times. However there was a flight in area at time of sighting and light of a/c was probable cause for sighting. Unusual perspective experienced when viewing celestial vault fm prone position is probably a contributing factor. There is no evidence available which indicates objt was not and a/c.
