10. BRIEF SUMMARY OF SIGHTING Shiny silver object flying parallel to a/c flying West at 31,000 feet. In sight from Denver, Colorado, to Hector, California. Pilot believed object was planet.		11. COMMENTS Planet Jupiter in Southern sky most likely object to be misinterpreted. Reported by several pilots on various flights. Some considered a planet as the object being observed. Movement to West consistent with this analysis. Since jet was flying West the object would retain its same position for the duration of the flight.
