5. PHOTOS <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	6. SOURCE Civilian	7. LENGTH OF OBSERVATION not rptd
8. NUMBER OF OBJECTS one	9. COURSE Westerly	10. BRIEF SUMMARY OF SIGHTING Firey blue-white object size of football moving at great speed. Passed close to plane & lit up surrounding surface of a/c. Appeared fm low altitude & climbing. A/C flying 120 dgr magnetic. Object appeared at about 50 dgr tangent to Earth. Cloud cover below a/c. Obj was very bright & had tail emitting sparks. Witnessed by crew and passengers.
11. COMMENTS Object appeared from below clouds. Thought to be missile; however, appearance including sparks trailing indicates that the object was a meteor. From distance illusion was coming from below the clouds. Object was heading toward the a/c, adding to this illusion. Case considered as a meteor sighting.		12. CONCLUSIONS

POSITION REPORTING PROCEDURE

1 SHANWICK OCA

Shanwick Flights: Unless otherwise required position reports will be made every 10° of longitude from 10° W to 70° W, (e.g. 10° W, 20° W, 30° W, etc.) Additional compulsory reports may be required by ATC at intermediate 5° longitudinal lines (e.g. 15° W, 25° W, 35° W, etc.)

Airline Flights: Unless otherwise required ACFT whose track is predominantly in a N-S direction will report every 5° parallel of latitude.

UK-Iceland Route: Reporting will be at 10° W and latitude 61° N and as required by ATC for that portion of flight within UK domestic

UK-Azores Route: Reporting will be at 10° W, 15° W, and latitude 43° N as required by ATC.

Shannon-Iceland Route: Designated reporting lines will be 58° N, 61° N. Additional reports may be requested by ATC for 58°, 59° N.

Shannon-Azores Route: Designated reporting lines will be 48° N, 45° N. Additional reports may be requested by ATC for 50°, 51° N and 48°, 50° N.

2 GANDER OCA

ACFT operating within Gander OCA shall flight plan via whole degrees of latitude at each 10° of longitude (e.g. 50° W, 40° W, 30° W). Deviations in excess of 30 NM N or S of a great circle track between these points shall be specified in the flight plan by indicating the latitude crossing the intermediate 5° of longitude.

The following are specific position reporting procedures required by the Oceanic Control Centre:

Westbound Flights

From the United Kingdom and other European points to the North American continent, crossing the continental boundary south of Belle Isle shall report at 30° W, 40° W, 45° W and at the western boundary of the Gander Oceanic Control Area. The position report at 45° W shall contain an estimate for the point of crossing the Gander Oceanic Control Area western boundary.

From the Azores and North Africa to points in Newfoundland, shall report at the Gander/Santa Maria Oceanic Control Area Boundary, at 45° W and at the western boundary of the Gander Oceanic Control Area. The position report at 45° W shall include an estimate for the point of crossing the western boundary of the Gander Oceanic Control Area.

From points in Iceland to points in Newfoundland, shall report at the Iceland/Gander Oceanic Control Area Boundary and 45° W and at 50° W as well as at the western boundary of the Gander Oceanic Control Area.

Eastbound Flights

From the North American continent operating south of Belle Isle and crossing the Gander Oceanic Control Area to points in the United Kingdom or the European continent, shall report at the western boundary of the Gander Oceanic Control Area and at 40° W and 30° W.

From Newfoundland to points in the Azores and North Africa shall report at the western boundary of the Gander Oceanic Control Area and at 45° W as well as at the Gander/Santa Maria Oceanic Control Area Boundary.

From or over Newfoundland to points in Iceland, shall report at the western boundary of the Gander Oceanic Control Area 50° W and at 45° W as well as the Gander/Iceland Oceanic Control Area Boundary.

17 38 2 2 7 7

DISTANCE: 20 NM from departure point of departing in ADIZ.
 TIME: Plus or minus 5 MIN from ETA over departing point or point of separation.

AIRBORNE TOLERANCES FOR APPROXIMATE TO ADIZ FLIGHT PLAN OR TRAFFIC CLEARANCE

Position reports must be transmitted at least once an hour within ADIZ, or as otherwise required, using established reporting points when practicable.

If this is impractical, estimated time, position and altitude of penetration of ADIZ not later than 15 MIN prior to penetration.

IFR flights outside air traffic control areas within scope of approach prior to entering in ADIZ, giving time, position and altitude of penetration along flight path to penetration, and ETA over next reporting point in ADIZ, unless otherwise directed by controller.

POSITION REPORTS

In the event flight plan must be filed prior to take off when flight penetrates or operates within low-level IFR flight level, it must be submitted to, transmission corrected information immediately to appropriate local authority.

In this interest of safety, if becomes necessary to operate from current flight plan, such deviation must be reported immediately to military flight service (USAF) and appropriate local authority. Flight plans will not be submitted more frequently than 15 MIN prior to penetration.

FLIGHT PLANS

IFR flight plan must be submitted to, transmission corrected information immediately to appropriate local authority.

If this flight plan must be filed prior to take off when flight penetrates or operates within low-level IFR flight level, it must be submitted to, transmission corrected information immediately to appropriate local authority.

In this interest of safety, if becomes necessary to operate from current flight plan, such deviation must be reported immediately to military flight service (USAF) and appropriate local authority. Flight plans will not be submitted more frequently than 15 MIN prior to penetration.

In the event flight plan must be filed prior to take off when flight penetrates or operates within low-level IFR flight level, it must be submitted to, transmission corrected information immediately to appropriate local authority.

If this flight plan must be filed prior to take off when flight penetrates or operates within low-level IFR flight level, it must be submitted to, transmission corrected information immediately to appropriate local authority.

54 196 170321Z 240 R U - 165 292 170321Z 270
FLIGHT PLANS

IFR flight plan must be filed prior to take off when flight penetrates or operates within Iceland Military ADIZ. In the event flight plan cannot be adhered to, transmit corrected information immediately to appropriate facility. In the interest of safety, if becomes necessary to deviate from current flight plan, such deviation must be reported immediately to military flight service (USAF) and/or appropriate Icelandic authority. Flight plans will not be submitted nor changed in flight to provide initial entry into ADIZ except in an emergency.

POSITION REPORTS:

IFR flights outside air traffic control areas will report to appropriate facility prior to entering or operating in ADIZ, giving time, position and altitude at last reporting point along flight path to penetration, and ETA over next reporting point; or, if this is impracticable, estimated time, position and altitude of penetration of ADIZ not earlier than 30 MIN nor later than 15 MIN prior to penetration.

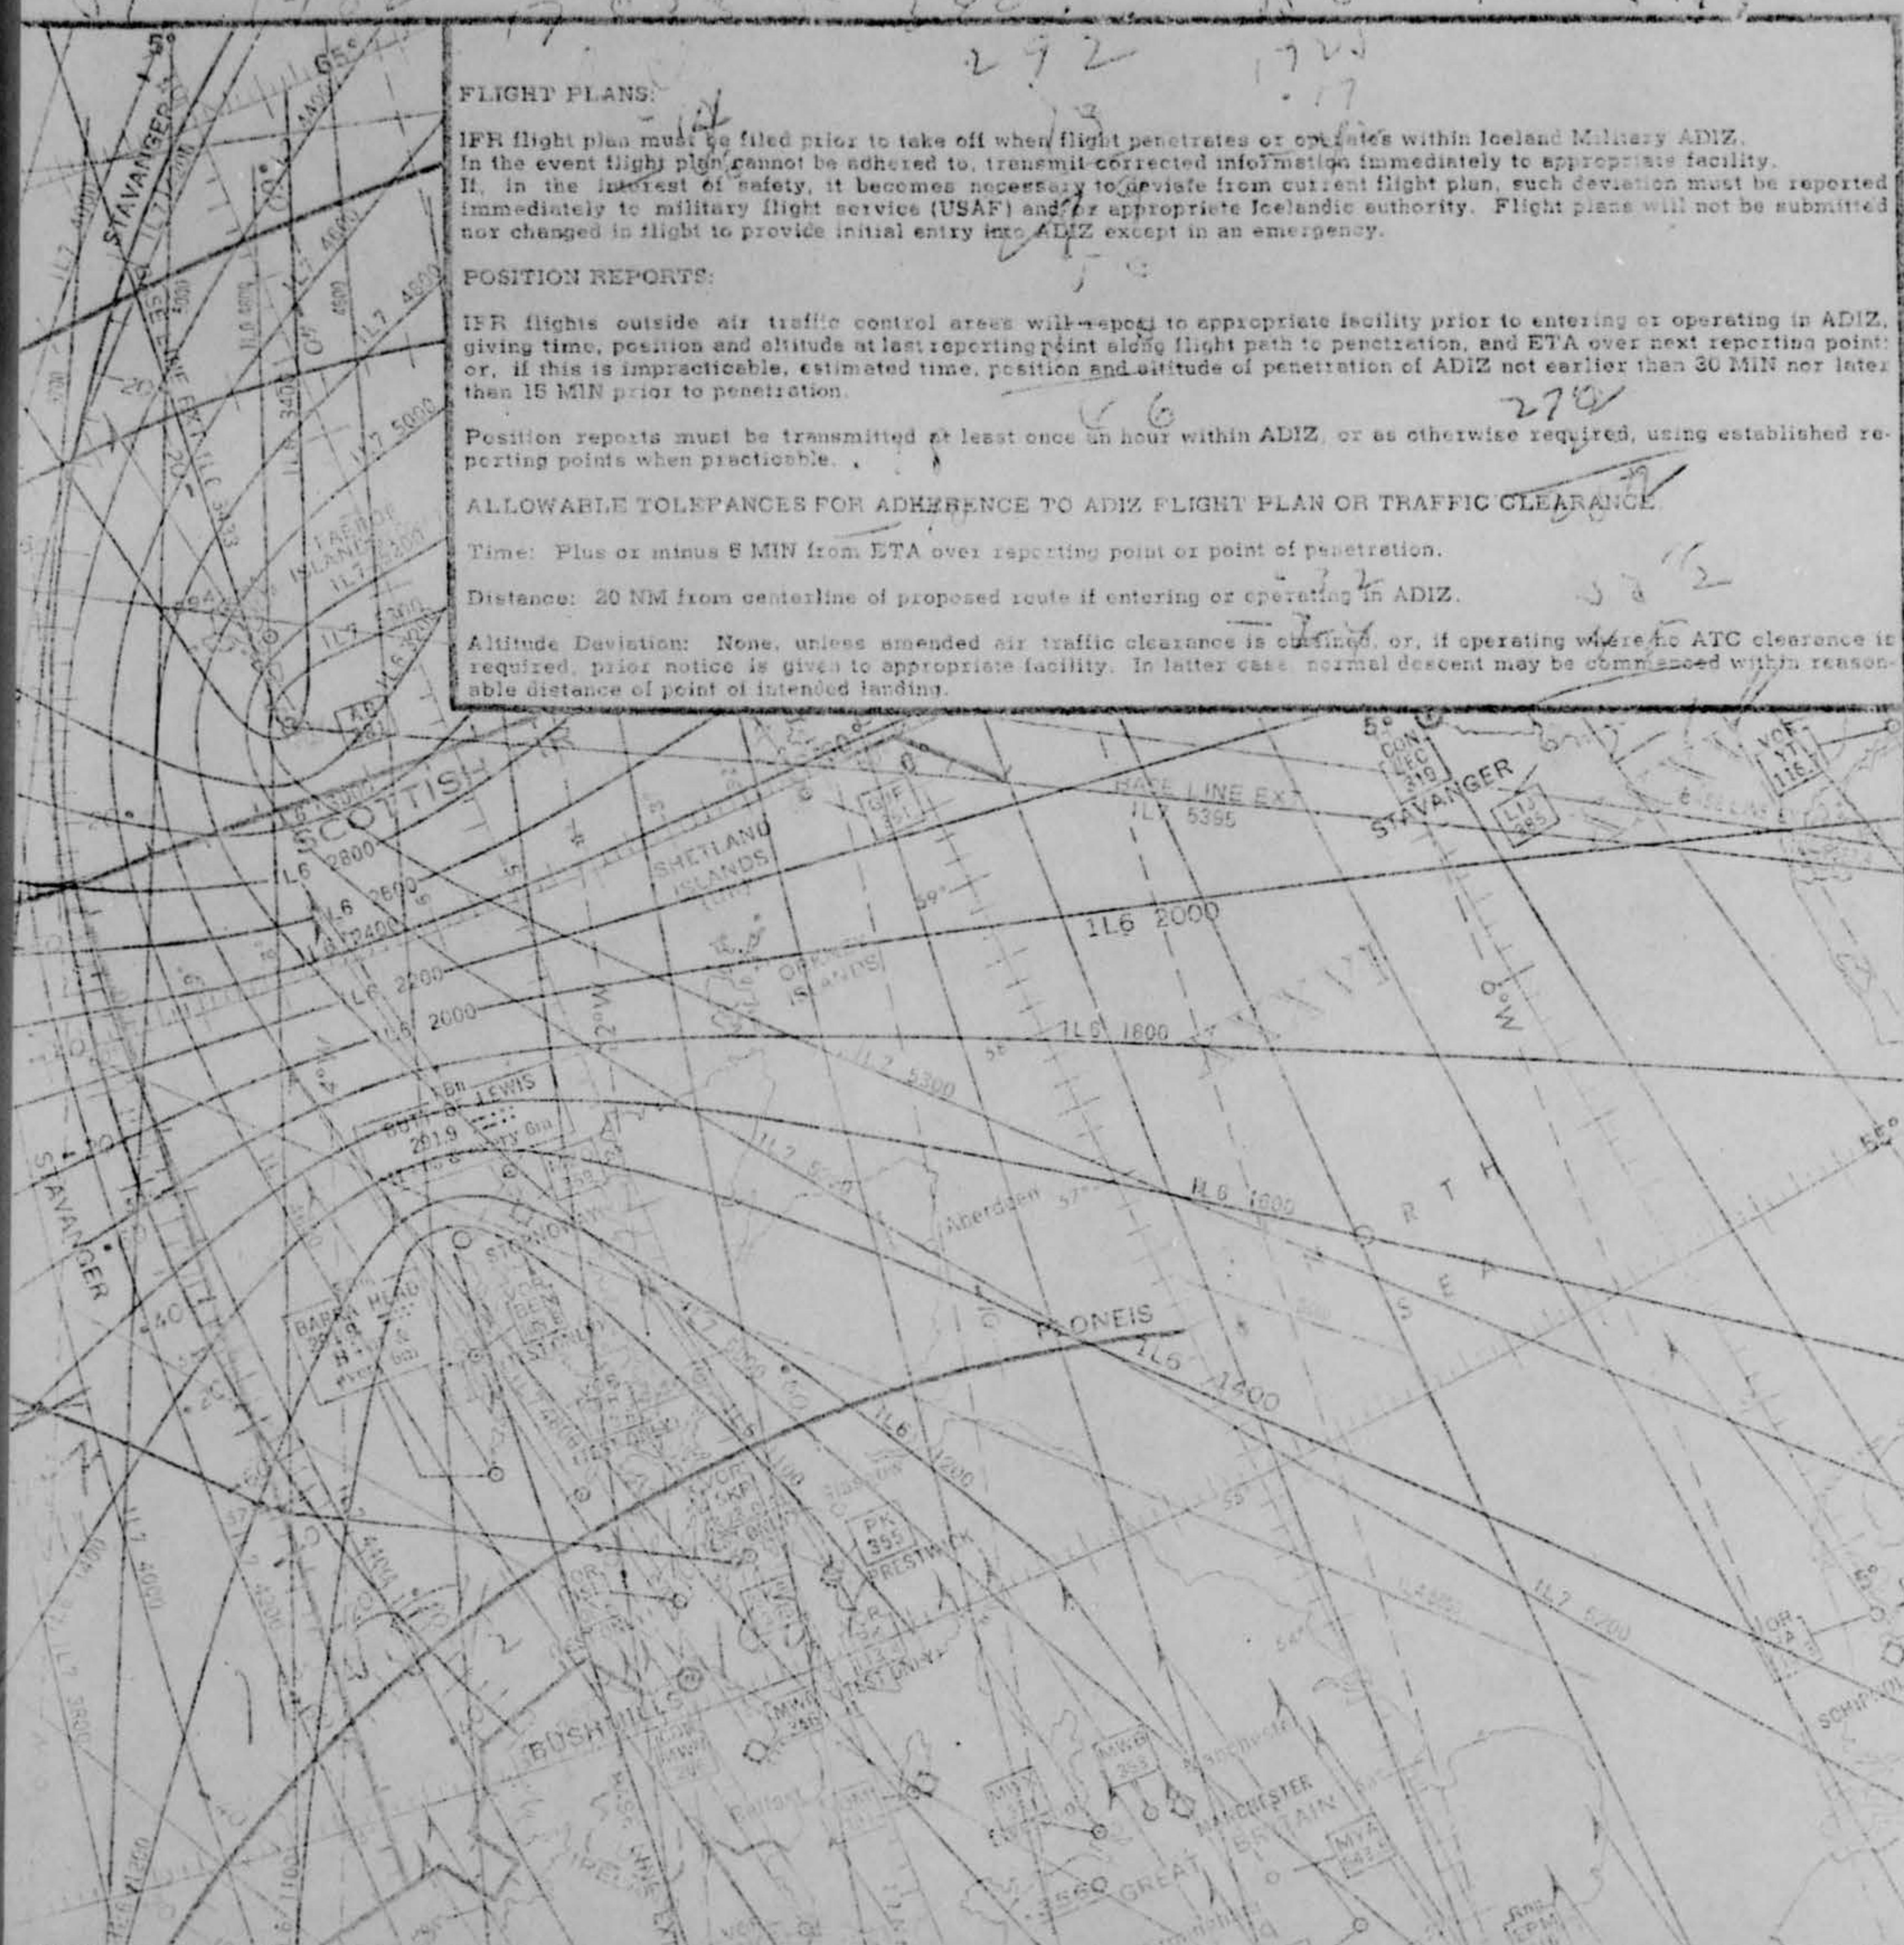

Position reports must be transmitted at least once an hour within ADIZ, or as otherwise required, using established reporting points when practicable.

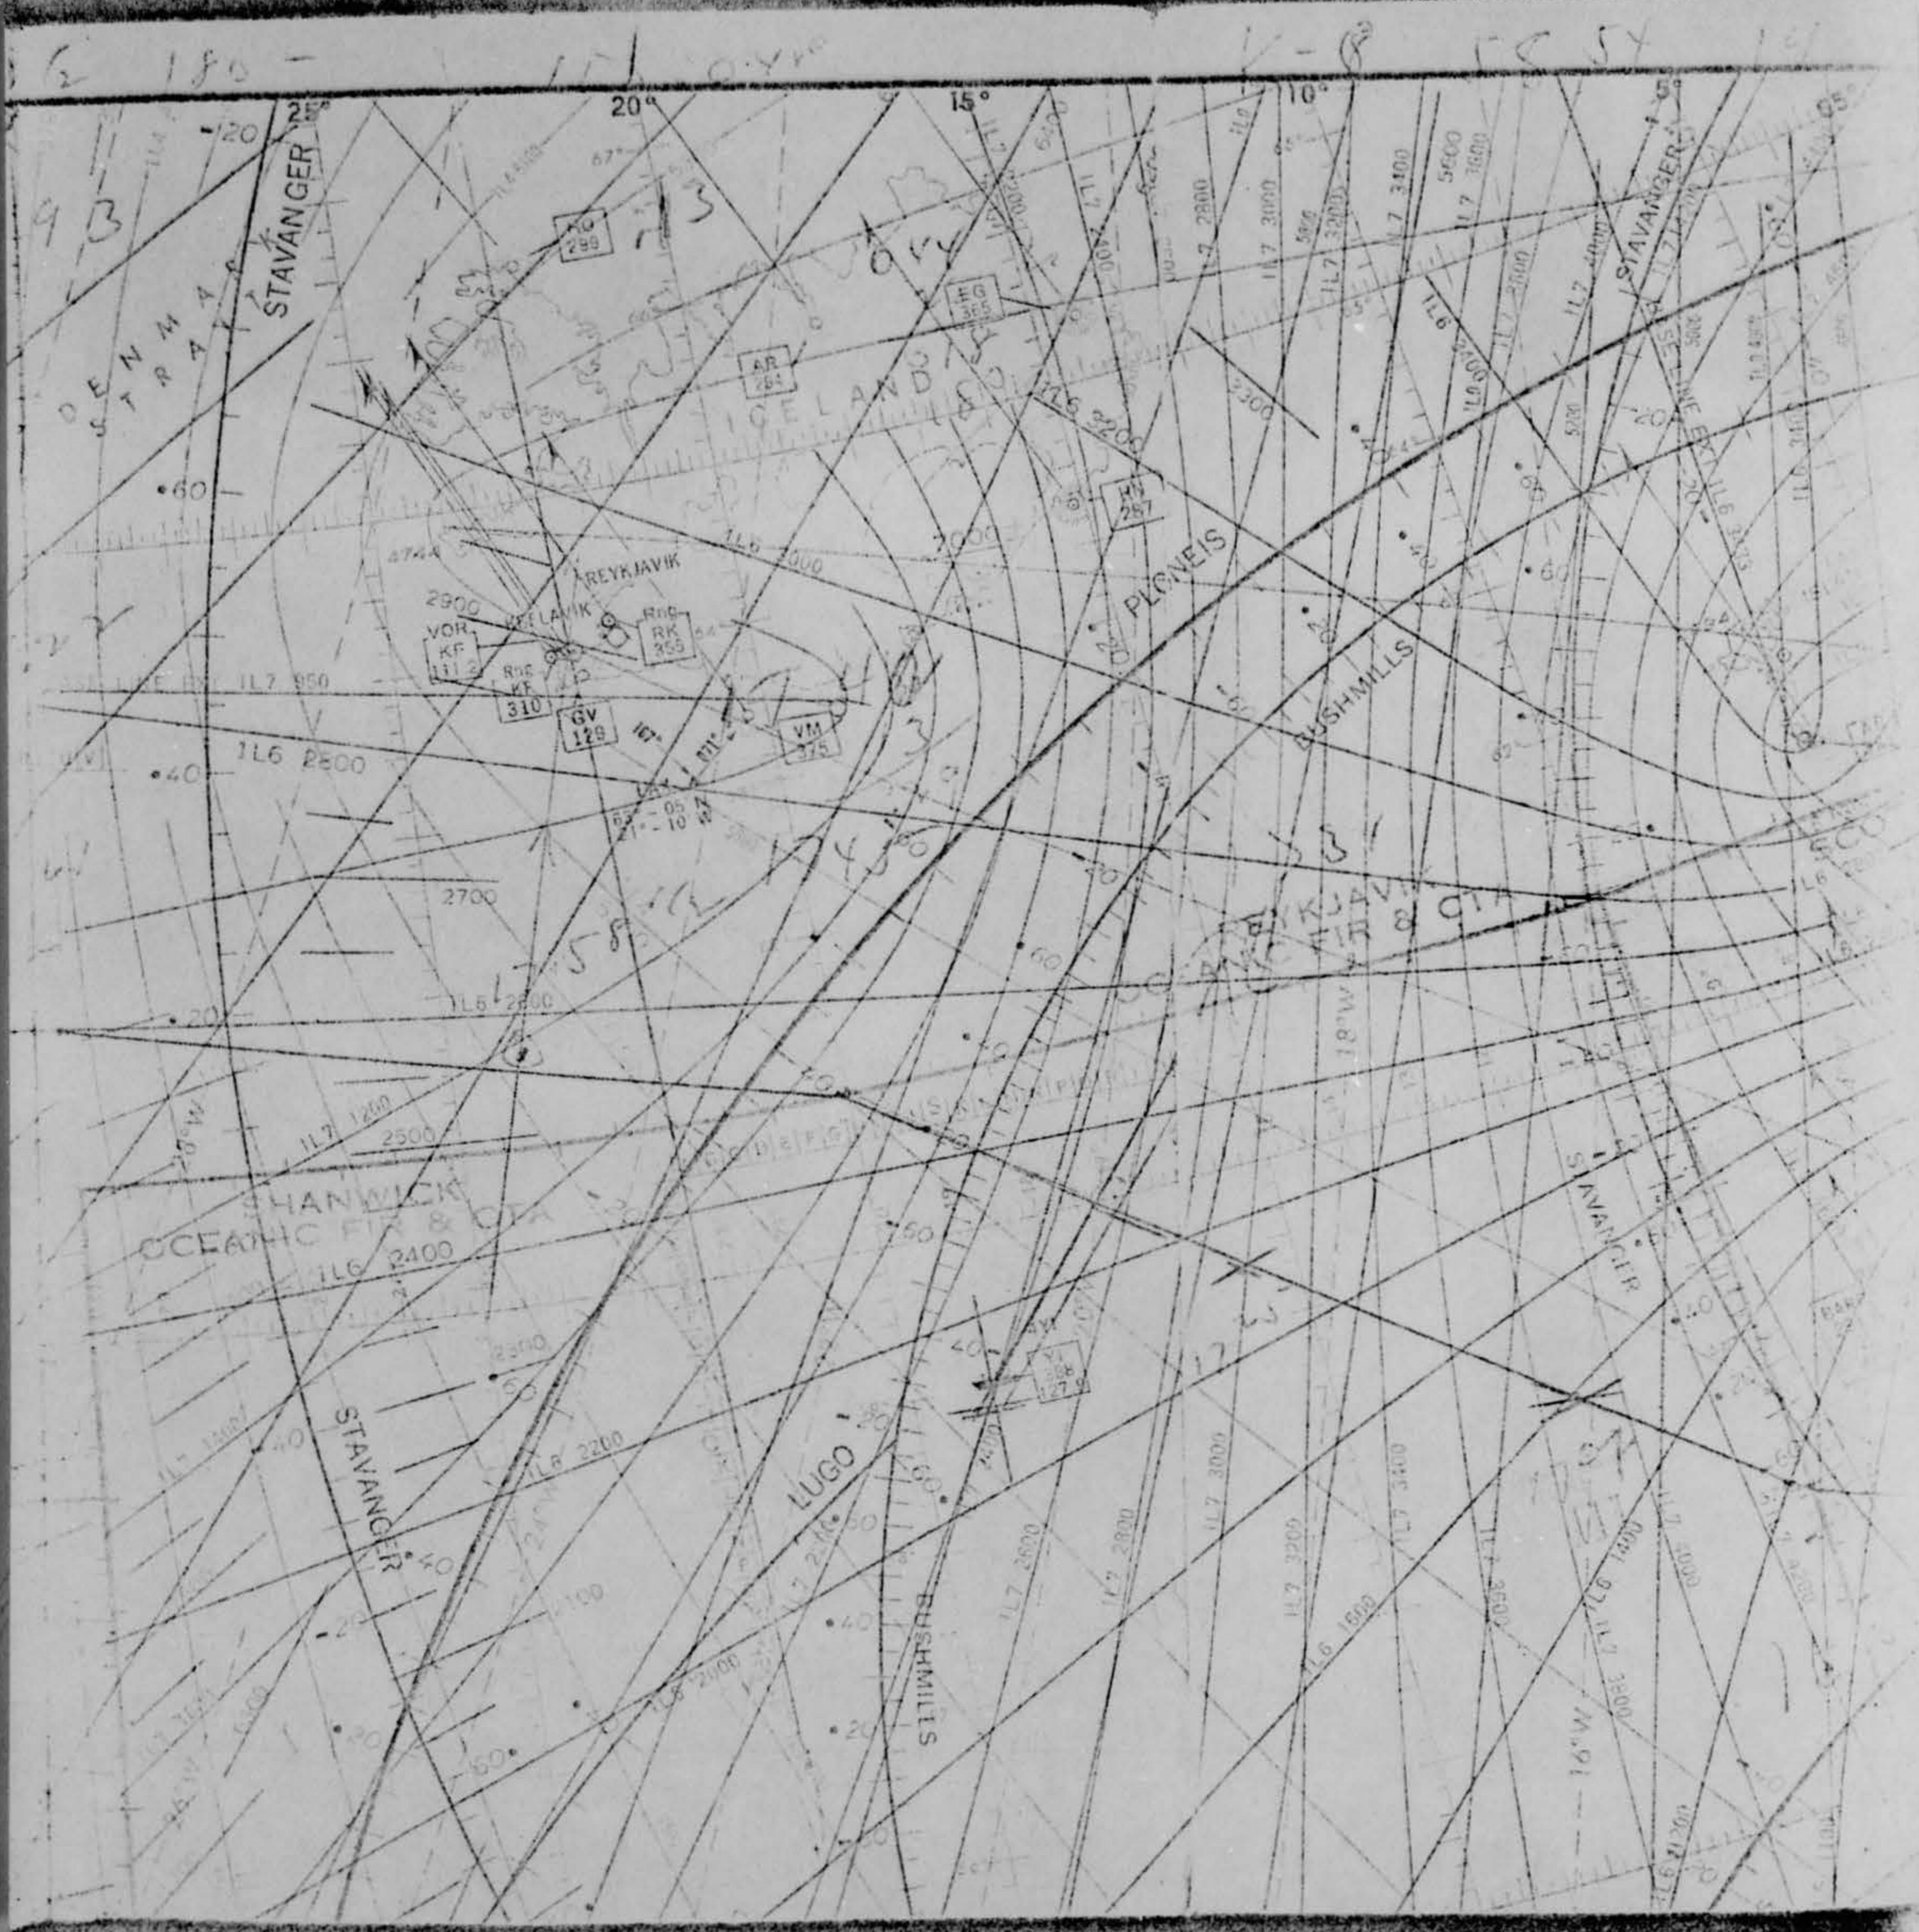

ALLOWABLE TOLERANCES FOR ADHERENCE TO ADIZ FLIGHT PLAN OR TRAFFIC CLEARANCE

Time: Plus or minus 6 MIN from ETA over reporting point or point of penetration.

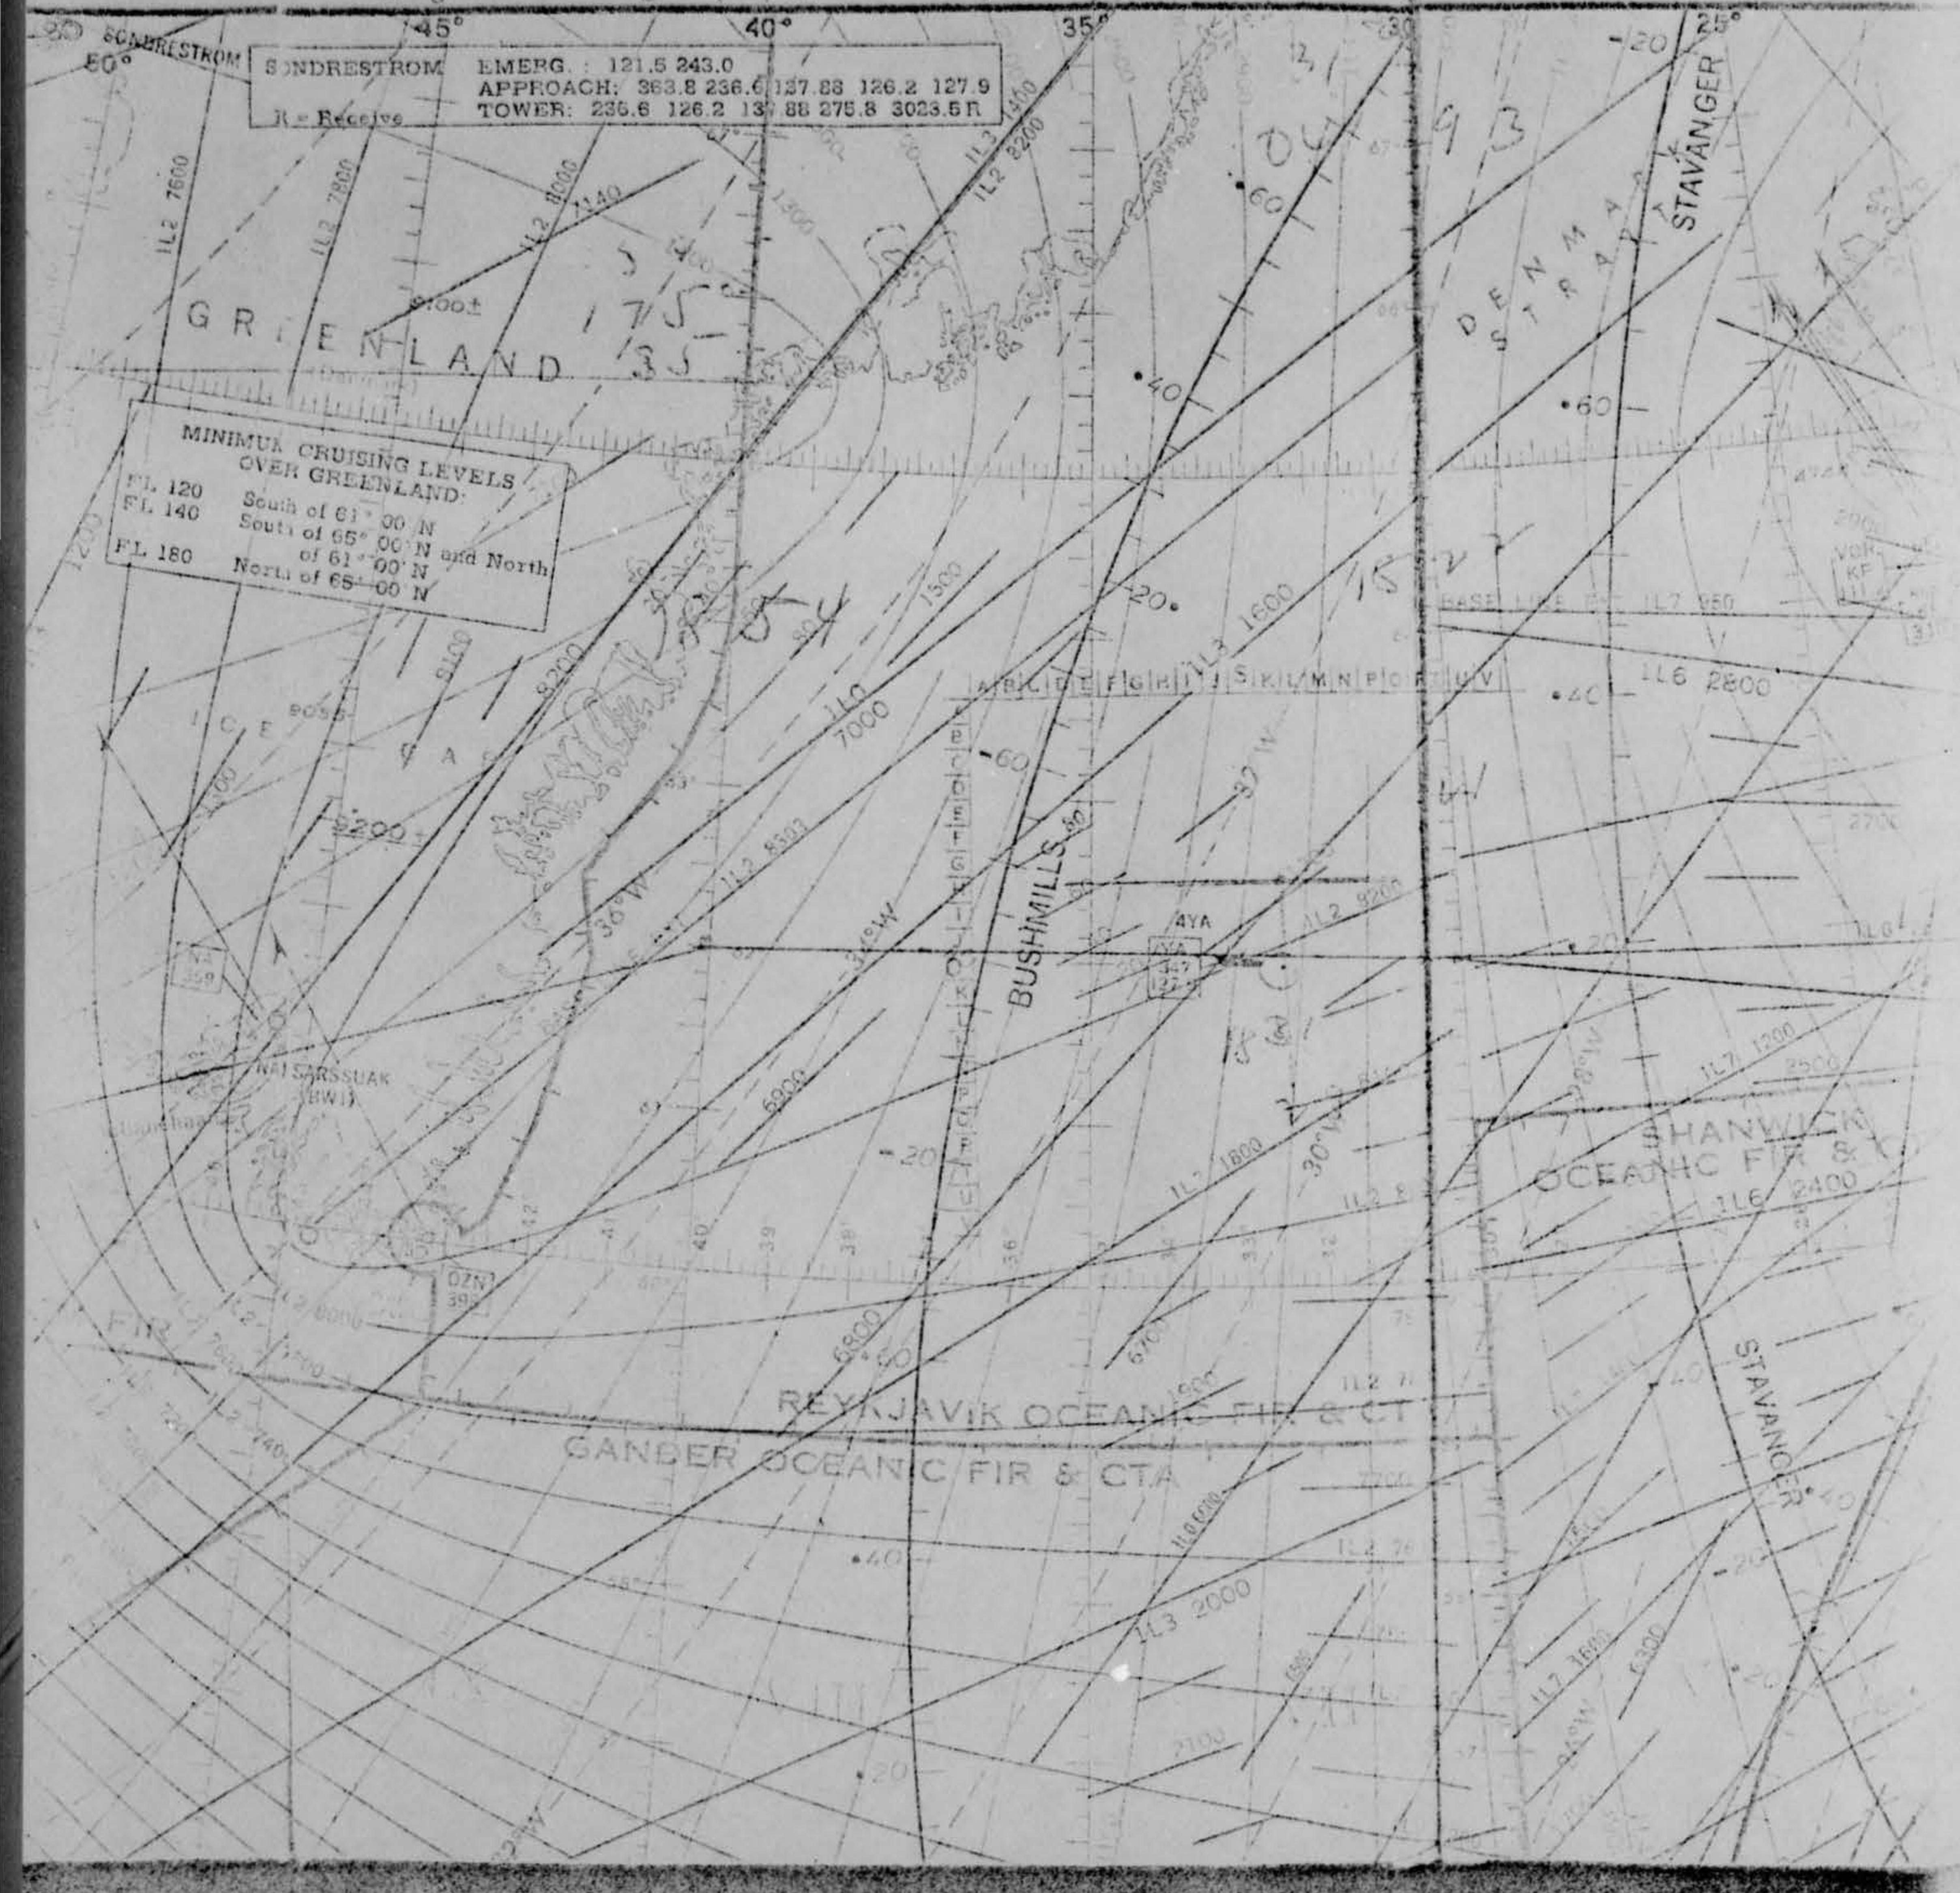

Distance: 20 NM from centerline of proposed route if entering or operating in ADIZ.

Altitude Deviation: None, unless amended air traffic clearance is obtained, or, if operating where no ATC clearance is required, prior notice is given to appropriate facility. In latter case, normal descent may be commenced within reasonable distance of point of intended landing.

REPORT OF UNIDENTIFIED FLYING OBJECT

Telephone Call: Received by Major R. J. Hauser
Time: 1615 Hours, 28 September 1962
From: Mr. ██████████
Address: ██████████
Dover, New Jersey

Resume of Conversation: Mr. ██████████ is a TWA pilot and he and his brother also own the AMOCO Station at the above address. On the night of 24 September 1962 Mr. ██████████ was flying a TWA Boeing 707 from New York to Lisbon at an altitude of approximately 37,000 feet. At 0424 ZULU time, location which is pinpointed on a Doppler Chart in his possession, there suddenly appeared a fiery object blue-white in color about the size of a football and moving at tremendous speed. It passed close to the plane and lit up the entire area surrounding the plane. Mr. ██████████ made a report of this incident upon landing at Lisbon; however, he wished to also report it to Picatinny Arsenal in event it may be of any value in relation to U. S. Army research. Mr. ██████████ indicated that this object could have been a missile item originating from Russia inasmuch as it appeared from that direction at low altitude and climbing at tremendous speed. He would be happy to discuss this further with Picatinny Arsenal personnel if interested.

In further discussion with arsenal personnel Mr. ██████████ indicated the following: He was flying a 120° magnetic heading. The object appeared about 50° with the tangent to the Earth. There was cloud cover below the plane at the time. The object appeared very bright with a tail emitting sparks. Other crew members witnessed the same phenomena. The blue line on the inclosed Doppler Chart (Chart TWA NA C/L-2) indicates his actual flight path; the position at which the object appeared is indicated by a blue circle inside a larger red circle.
